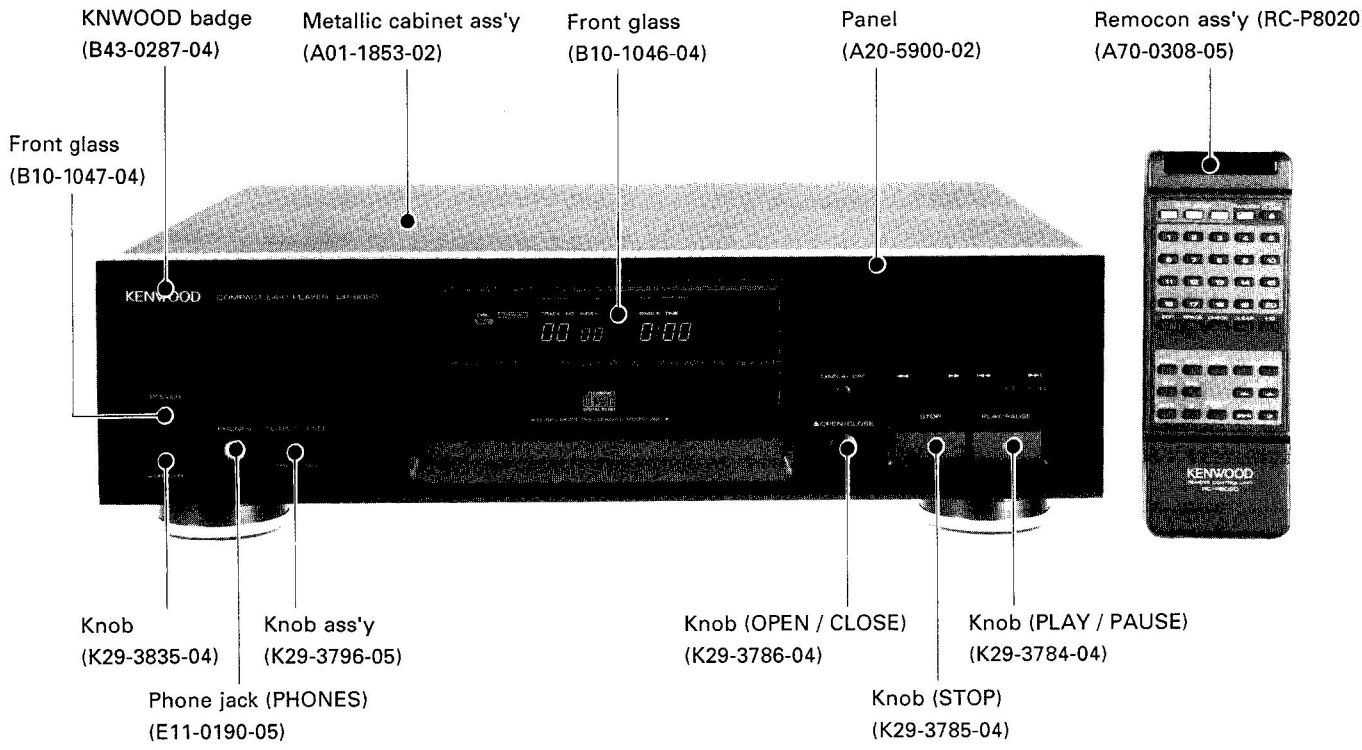
COMPACT DISC PLAYER

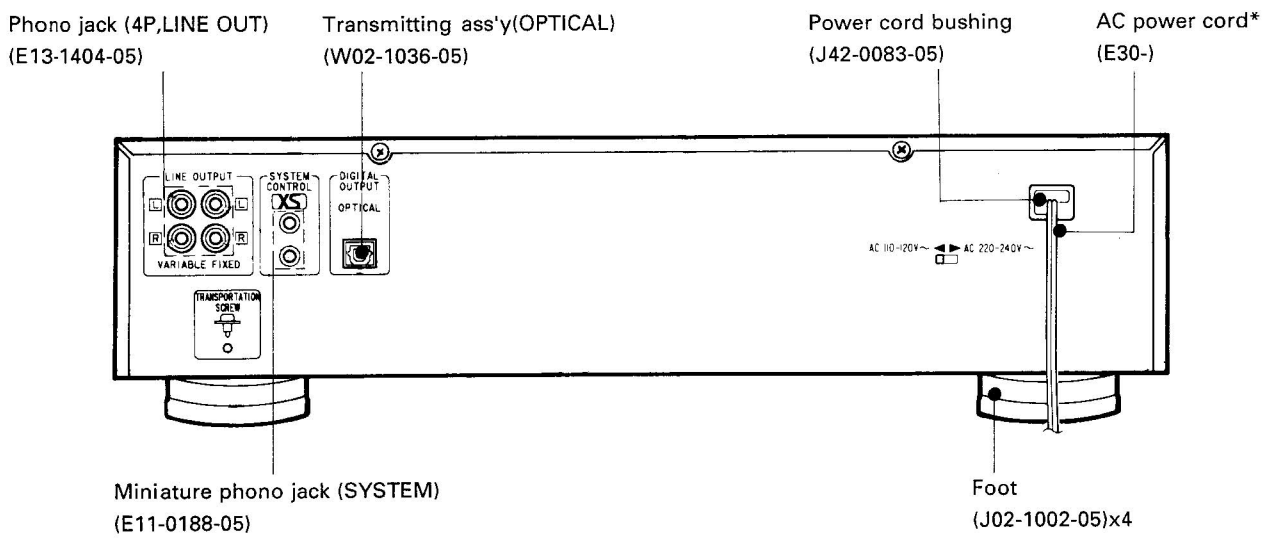
DP-8020

SERVICE MANUAL

KENWOOD

B51-3991-00 (O) 3223





In complicance with Federal Regulations, following are reproductions of labels on, or inside the product relating to laser product safety.

KENWOOD-Corp. certifies this equipment conforms to DHHS Regulations No. 21 CFR 1040. 10, Chapter 1, Subchapter J.

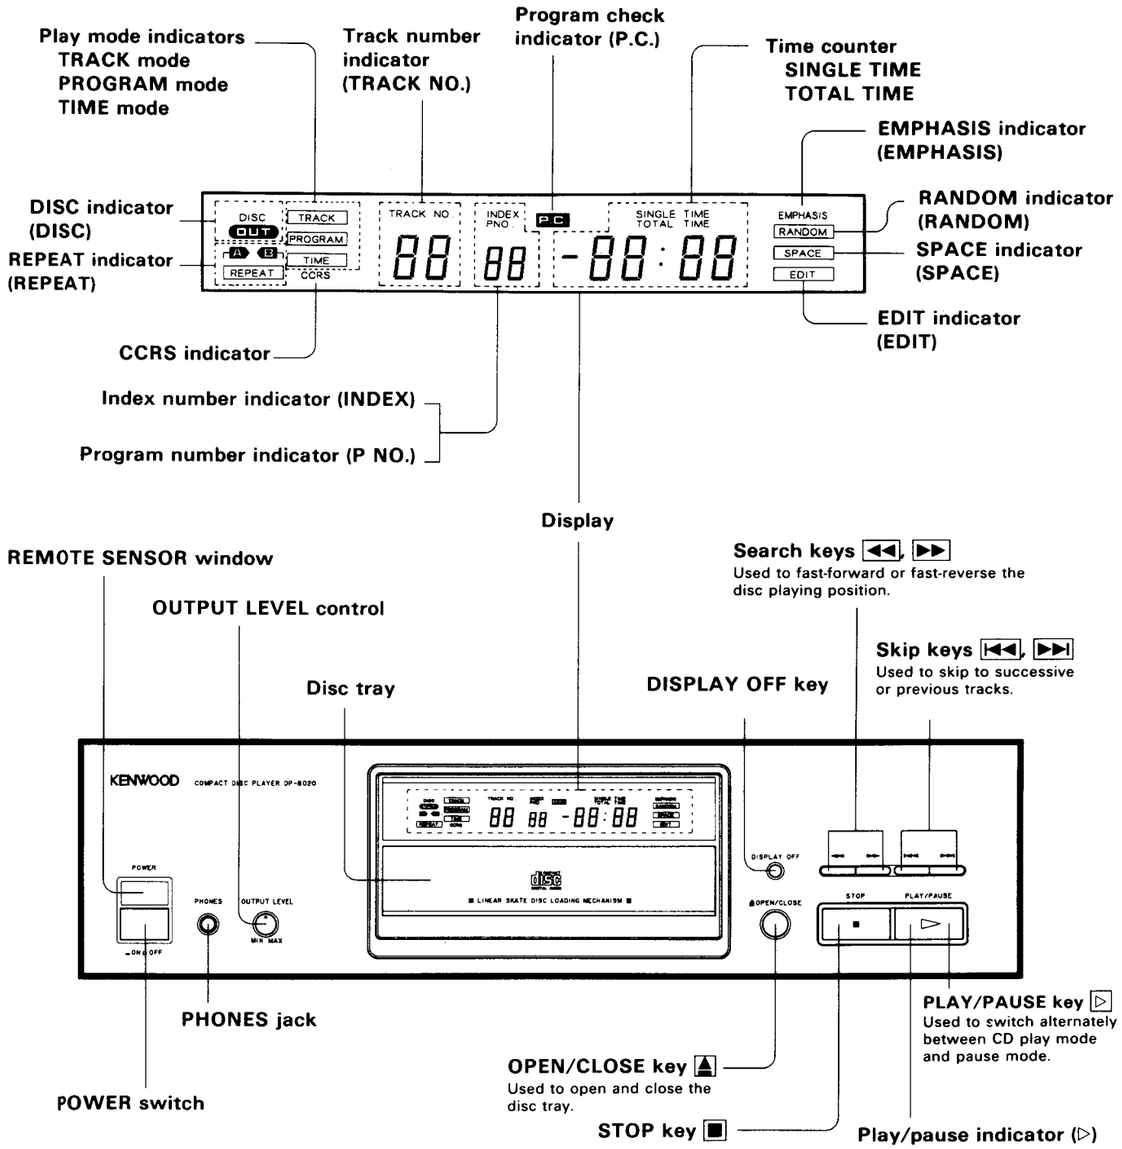
DANGER : Laser radiation when open and interlock defeated. AVOID DIRECT EXPOSURE TO BEAM.

*** Refer to parts list on page 72.**

DP-8020

CONTENTS

CONTROLS AND INDICATORS



DISPLAY OFF key

If the DISPLAY OFF key is pressed during disc play, the display is extinguished.

- If the DISPLAY OFF key is pressed at any time other than during disc play, the display will not be extinguished.
- When an operation key is pressed (excluding adjustment of the OUTPUT LEVEL control) while the display is in the DISPLAY OFF state, the display appears for a few seconds.
- When the display is in the DISPLAY OFF state during program play, the display appears for approximately 2 seconds at the beginning of each tune.

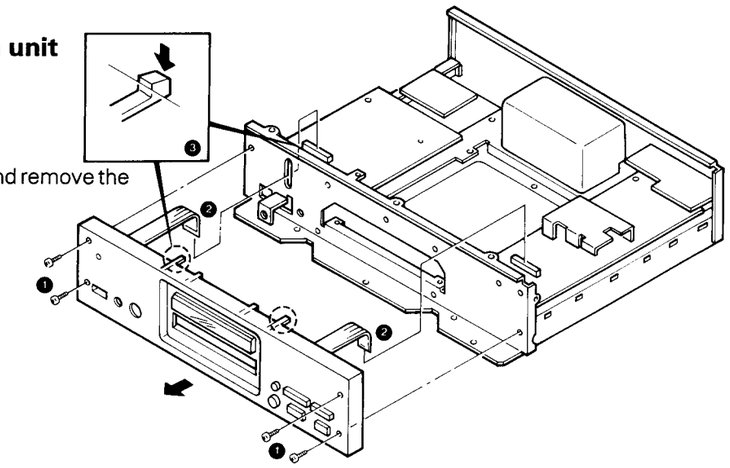
The DISPLAY OFF state is canceled when the DISPLAY OFF key is pressed again or when the OPEN/CLOSE key ⏏ or STOP key ■ is pressed.

DP-8020

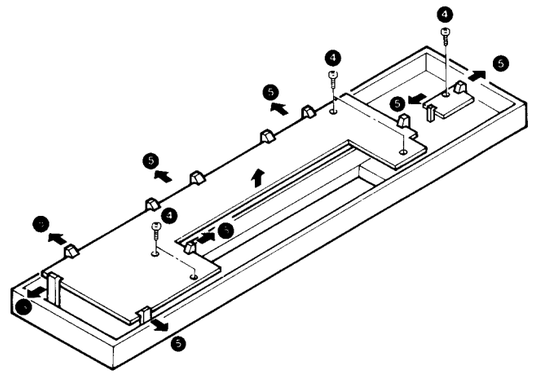
DISASSEMBLY FOR REPAIR

1. How to remove the operation unit

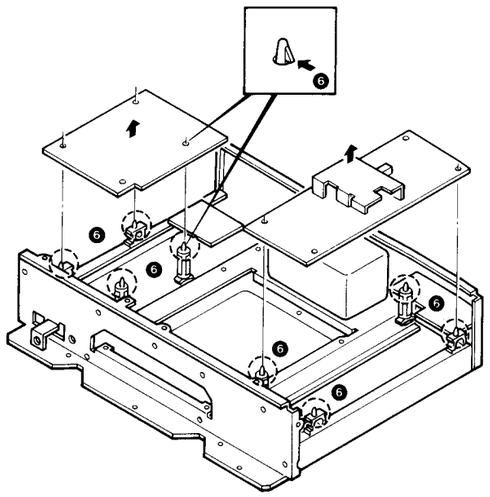
1. Remove the 4 screws (❶).
2. Pull out the 2 flexible Cables (❷).
3. Push the projection of the front panel and remove the panel (❸).



4. Remove 5 screws (❹).
5. Slide the projections and remove pc board ass'y (❺).

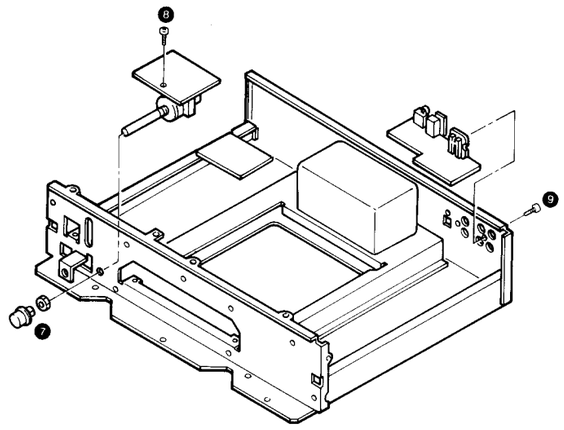


6. Push the projection of pcb holder (❻) and remove pc board ass'y.



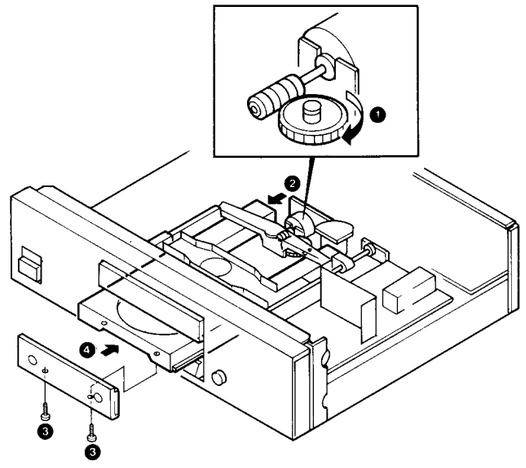
DISASSEMBLY FOR REPAIR

7. Remove the nut and knob (❼).
8. Remove the screw (❽) and volume control pc board ass'y.
9. Remove the screw (❾) and output pc board ass'y.

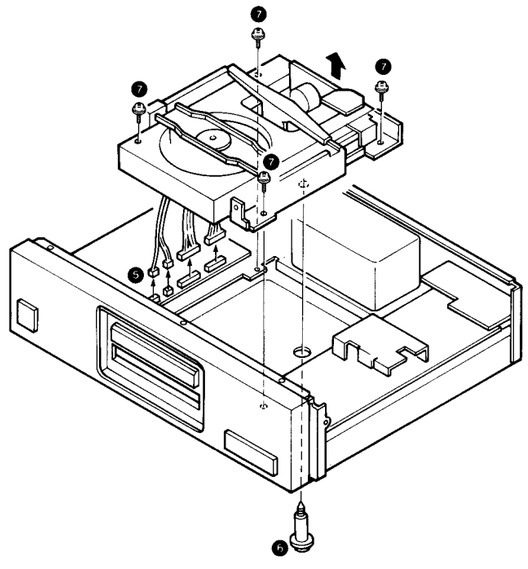


2. How to remove mechanism ass'y

1. Turn the gear of clamp-motor to clockwise by hand (❶).
2. Push the left back of the tray (❷).
3. Remove the 2 screws (❸) and the dressing panel.
4. Set the tray to closed position (❹).



5. Remove 4 connectors (❺).
6. Remove shipment safety screw (❻).
7. Remove 4 screws (❼) and mechanism ass'y.



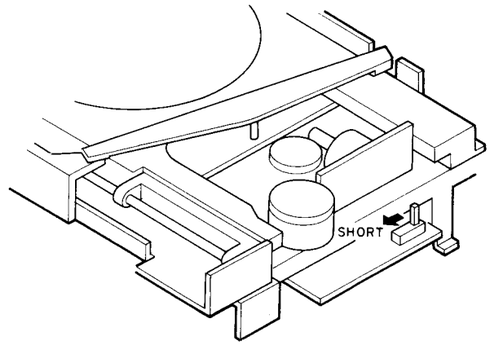
DP-8020

DISASSEMBLY FOR REPAIR

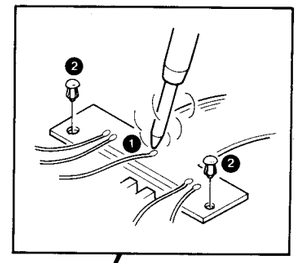
3.How to replace laser pickup

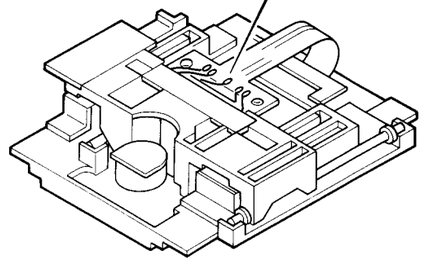
1. When checking or removing the laser pickup,first set the slide switch to SHORT position on mechanism pc-board.

Note: If repair finished, reset the slide switch to original position.



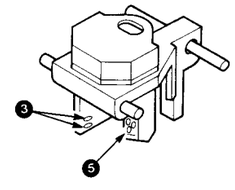
2. Pull out the tray (refer to how to remove mechanism ass'y.)
3. Unsolder the 5 leads from (❶) bottom of mechanism (blue : 2, red : 2, black : 1, total : 5) and remove push rivets (❷).

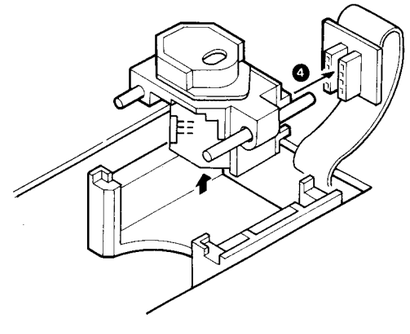




4. Remove 4 screws in order (refer to next page).
5. lift up the pick up and solder the short land (❸) and next pull out connector (❹).
6. When replace the pickup, first set the connector (❹) and the unsolder the solder bridge on the short land

Note: Don't touch the part of laser diode of pickup when handling it (❺). Don't screw tightly the pickup mounting screws when mounting it. Because the screw bent and the pickup don't fixed proper position.

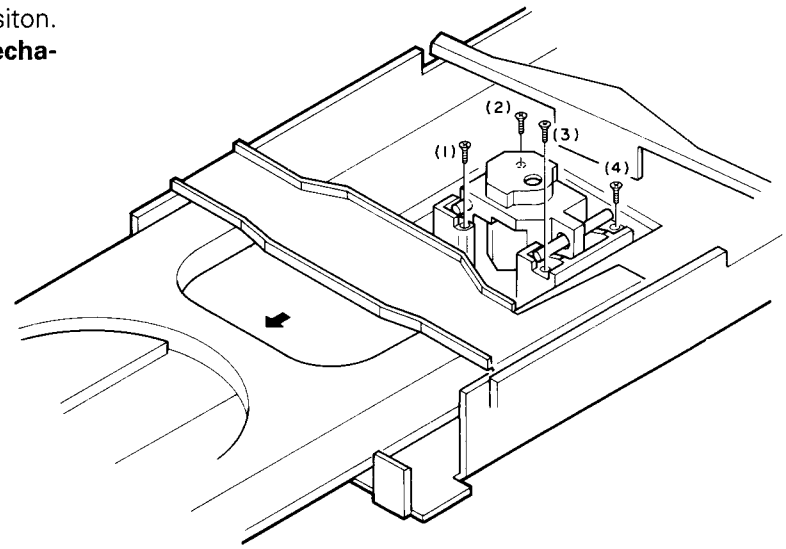




DISASSEMBLY FOR REPAIR

7. Solder5 leads and fix the push rivet to original positon.

Note: Check the slide switch position when mechanism ass'y mounted.



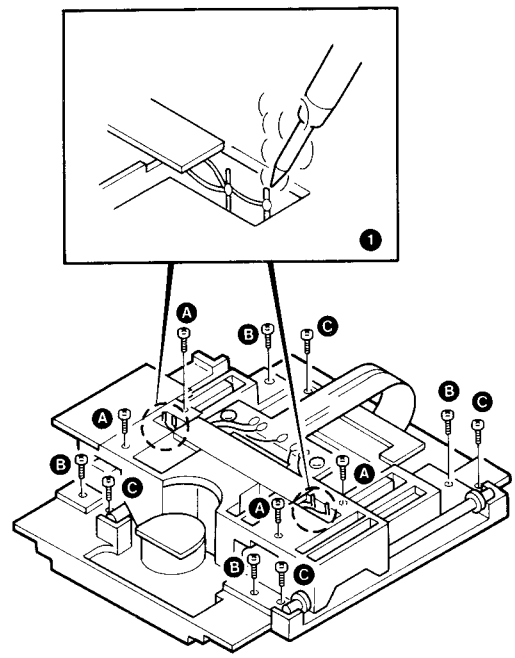
4. How to replace yoke ass'y

1. 4 leads conncted to yoke ass'y (❶)
   (red : 2, blue : 2, total : 4)

Note: If any pin of yoke ass'y is heated for an period of time or is subject to the application of an excessive force, it may be broken or come off.

2. Remove the four screws(Ⓑ) fixing the laser pickup holder and yoke assi'es.
3. Remove the four screws (Ⓒ) at the sensor section yoke ass'y and drive section yoke ass'y.

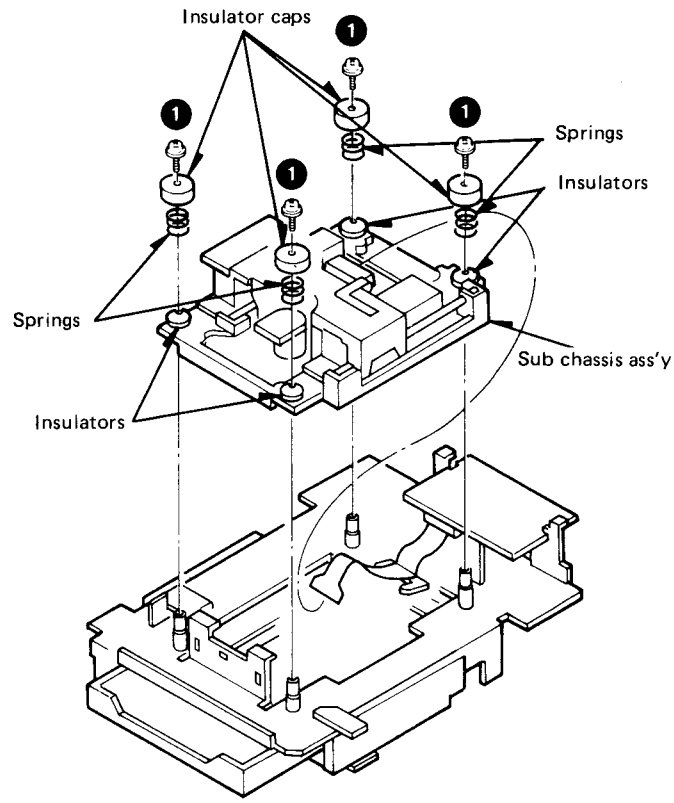
Note: In each yoke ass'y a coil magnet is incorporated. If disassembled, a load can be applied in the sliding action or unwanted matter (screw, lead cutting dusts, etc.) can adhere to the magnet. Moreover, after completion of repair, also check whether or not unwanted matters such as screw, lead cutting dusts, etc. adh ere to the magnet.



DISASSEMBLY FOR REPAIR

5. Removing the sub chassis and the insulators

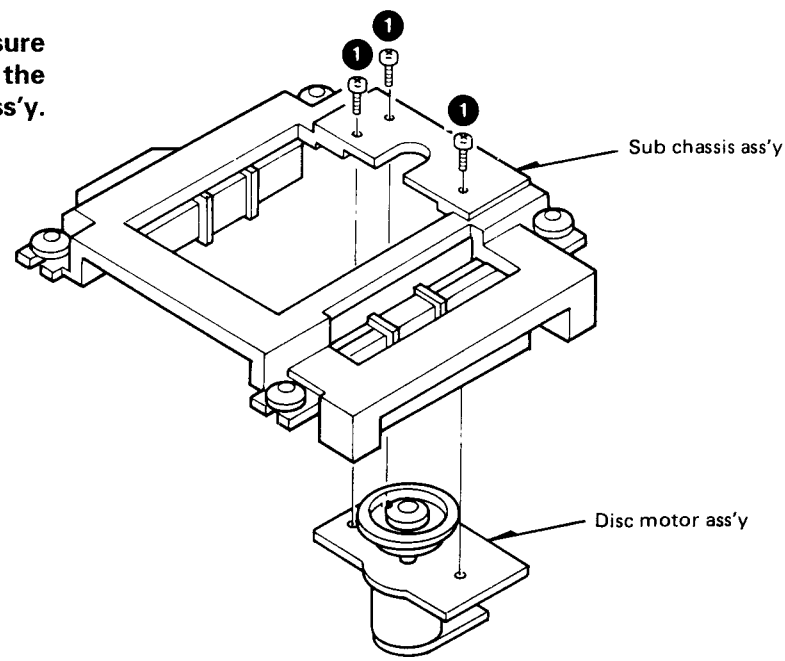
1. As shown on the right, remove the four tapping screws (❶), and the laser pickup section will be detached together with the sub chassis ass'y to which it is installed.



6. Replacing the disc motor

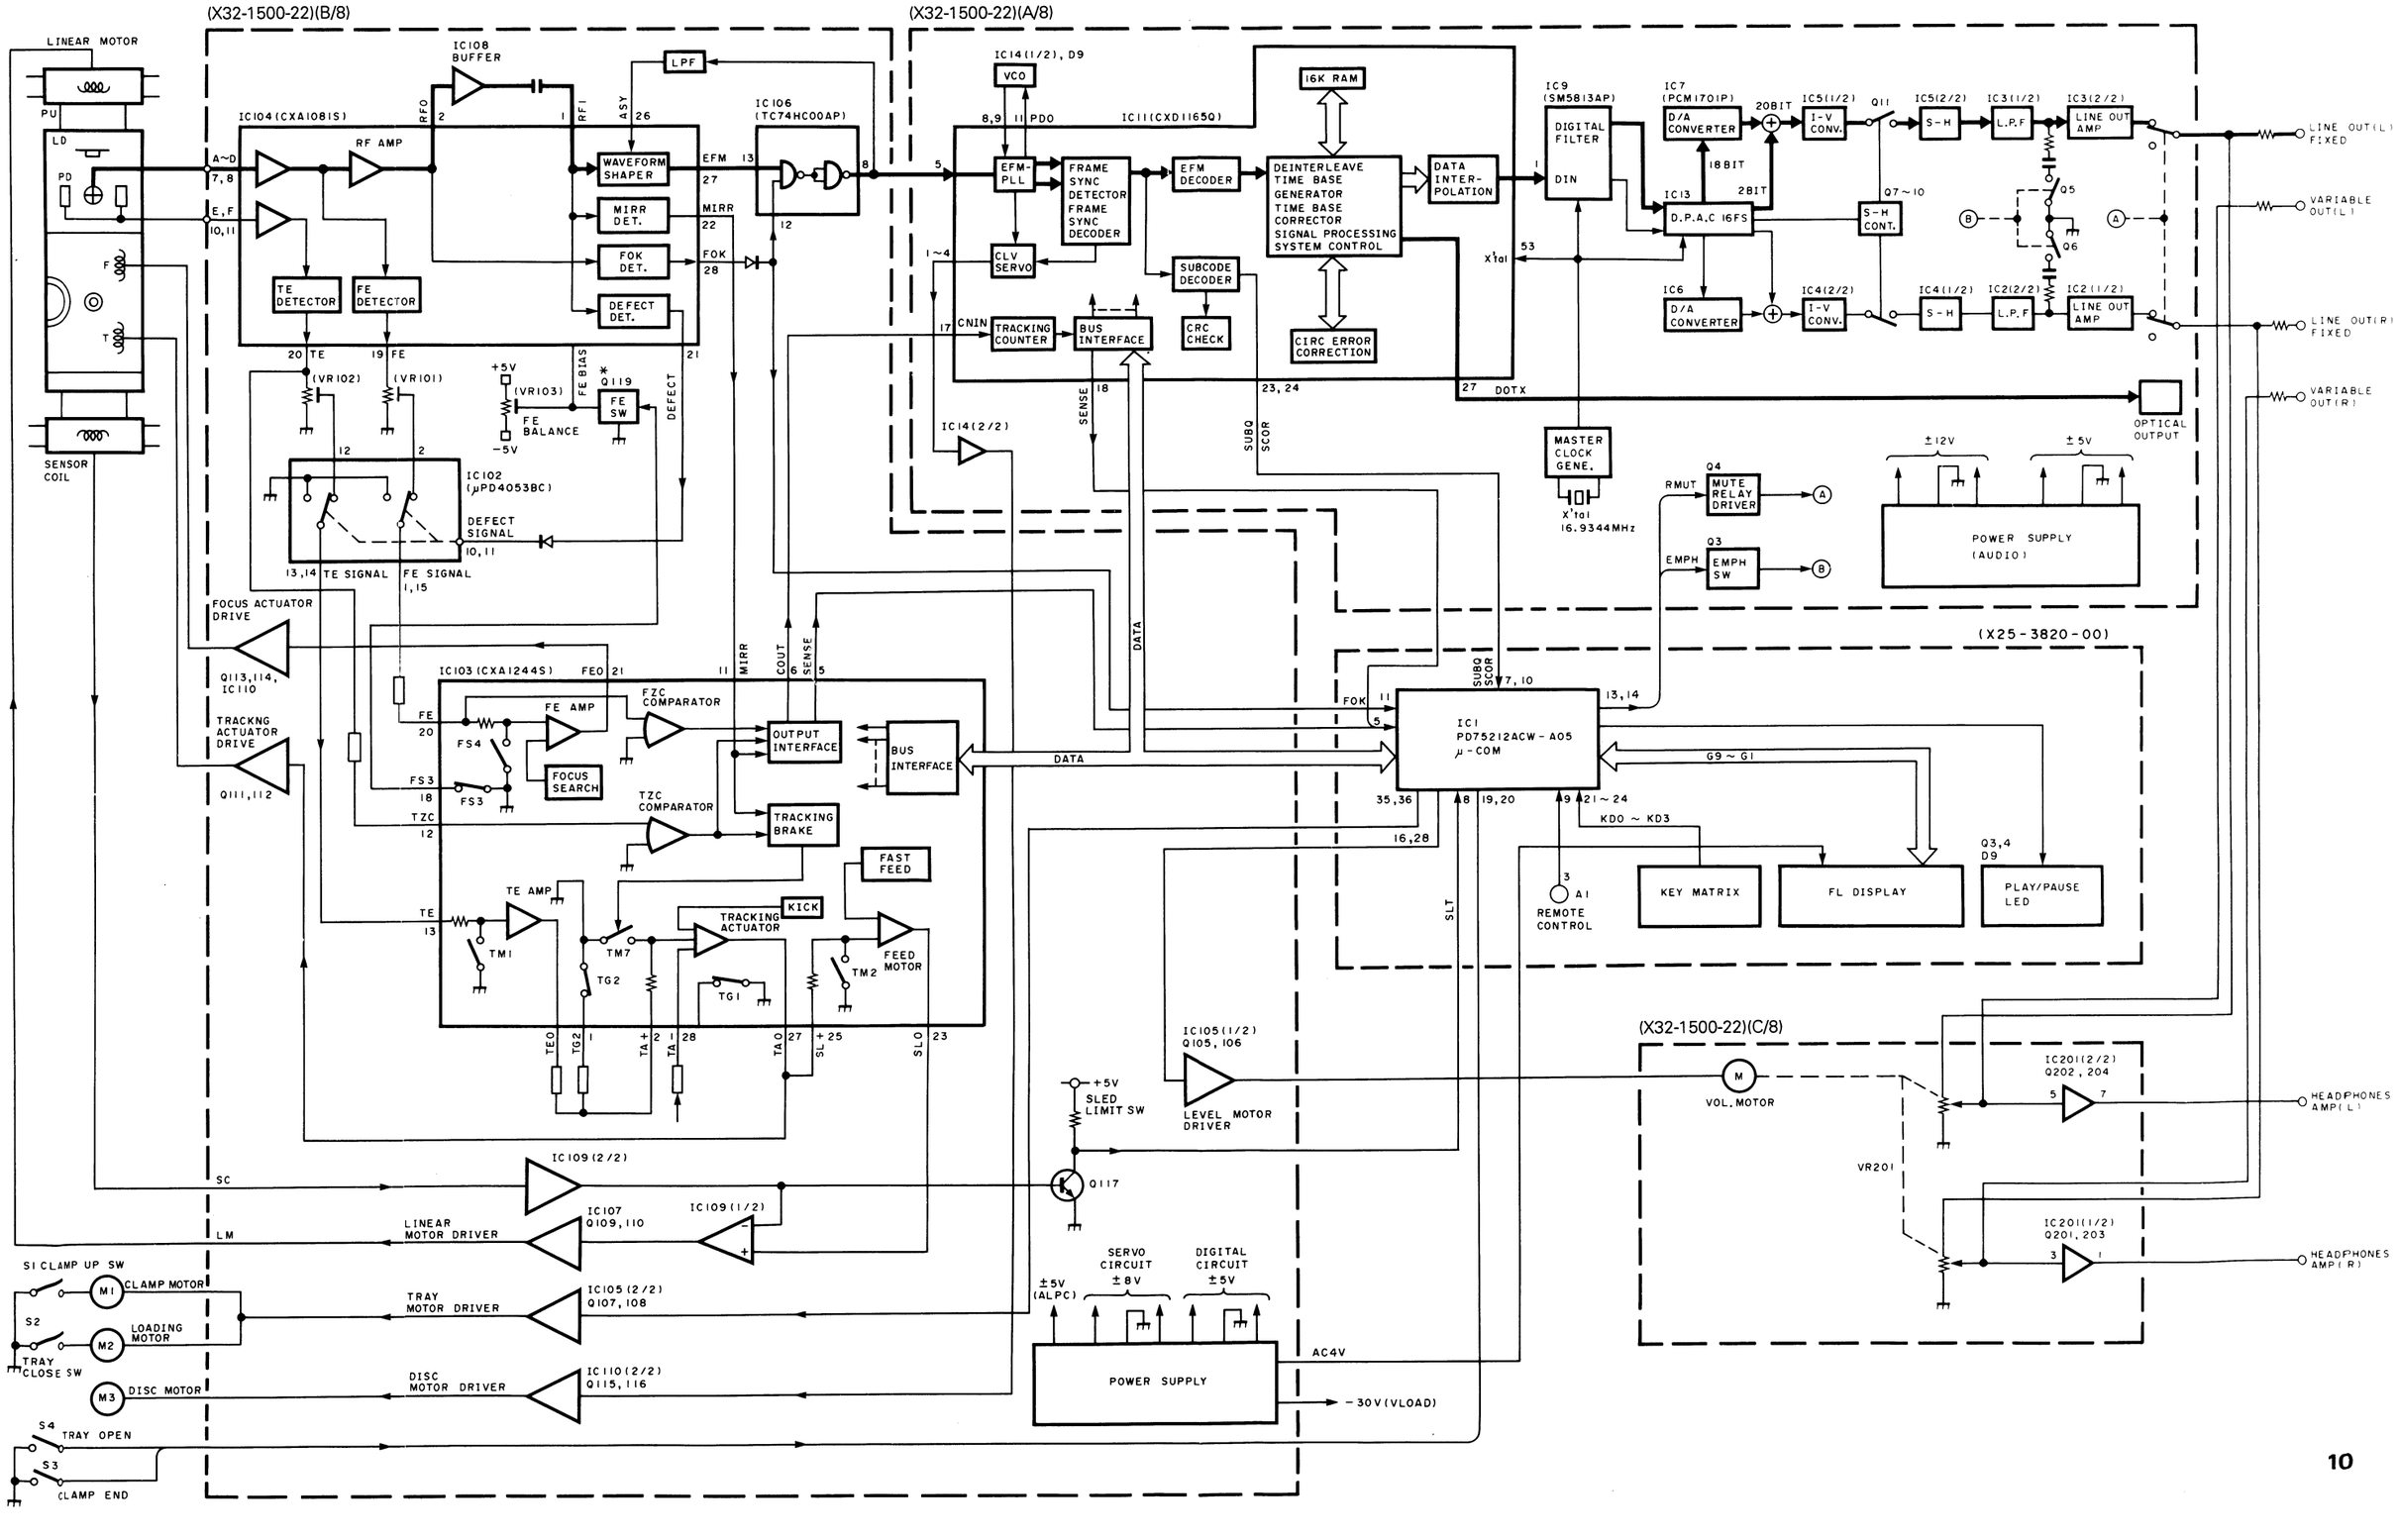
1. Remove the three screws (❶) fixing the sub chassis ass'y, then replace the disc motor ass'y.

Note: When installing the new disc motor, be sure to positively mount it in alignment with the two grooved portions of the sub chassis ass'y.



DP-8020 DP-8020

BLOCK DIAGRAM



CIRCUIT DESCRIPTION

1. Description of components

1-1. CD PLAYER UNIT (X32-1500- 22)

Ref. No.	Part. No.	Use/Function	Operation/Condition/Compatibility
IC1	NJM4565D	Power Supply	For analog circuit of DAC.
IC2, 3	NJM4565D	L.P.F	2nd low pass filter and amplifier for output.
IC4, 5	NJM4580D	I - V Converter	Conversion of D/A converter current output into voltage from. (Refer to D.P.A.C at page 14)
IC6, 7	PCM1701P	DAC	Conversion of 18bit digital data into analog one.
IC8	NJM4565D	Power supply (+5V)	For oscillation (IC10), Digital filter (IC9) and HIC.
IC9	SM5813AP	Digital filter	Convert 16bit FS to 20bit 8FS.
IC10	TC74HCU04AP	Oscillation	Oscillation master clock 16.9344MHz and applied clock signal to IC9,11, and 13.
IC11	CXD1165Q	Digital signal processor	All digital signal processing operation, Including the EFM data demodulator, error correction, interpolation circuit, PLL, CLV, Digital output jitter free.
IC12	NJM4565D	Power supply (+5v)	For IC11,15 and IC14 of PLL and CLV.
IC13	KAG01	Bit converter	Add 2bit to 18bit DAC and 18bit to 20bit jitter free. (refer to circuit descrip tion at page 39)
IC14	NJM4565D	PLL, CLV servo	Servo amplifier for disk motor and control VCO freq. by phase comparation signal.
IC15	TC74HC00AP	Data select	No use for repair.
IC101	NJM4558D	Power supply (+5V)	For servo circuit.
IC102	µPD4053BC	Defect circuit	If RF signal defect (IC104 Defection), servo circuit is open and playback goes on.
IC103	CXA1244S	Servo signal processor	Control of focusing error tracking servo and feed servo pulses for servo control.
IC104	CXA1081S	RF amplifier	Focusing error signal generator, tracking error signal generator, RF signal generator and phase compensation.
IC105	NJM4558D	Motor control	For motor of OPEN/CLOSE and one of UP/DOWN.
IC106	TC74HC00AP	Buffer amplifier	For EFM signal to signal processor.
IC109	NJM4558D	Amplifier	For sled drive of pickup travel.
IC110	NJM4558D	Amplifier	For focus actuator drive and disk motor.
IC201	NJM4565D	Amplifier	For headphone.
Q1	2SB941	Power supply (+)	For analog circuit.
Q2	2SD1266	Power supply (–)	For analog circuit.
Q3	DTC124EN	Inter face	For emphasis and micro processor.
Q4	2SC1740S	Inter face	For relay, micro processor and relay drive.
Q5, 6	2SC2878	Switch	For emphasis.
Q7, 8	2SA1206	Inter face	For sample-hold circuit and inter face of clock signal.
Q9, 10	2SK246	Power supply	When Q7, 8 are off condition, Q11, 12 are off.
Q11, 12	2SK152	Switch	Control the gate Q7~10. If on, sample mode. If off, hold mode.
Q13, 14	2SC3940A	Power supply (+5)	For DAC.
Q15	2SC3940A	Power supply (+5)	For digital filter (IC9).
Q16	2SC3940A	Power supply (+5V)	For oscillation (IC10).
Q17	2SA1534A	Power supply (–5V)	For PLL and CLV.
Q18	2SC3940A	Power supply (+5V)	For PLL, CLV and signal processor.
Q19	2SK246	Power supply (+5V)	—
Q20 Q21	2SA933S 2SC733 (A)	Muting amplifier	Control output of optical when power on. Buffer amplifier for optical output.
Q101	2SA1534A	Power supply (+5)	For servo circuit.
Q102	2SC3940A	Power supply (–5V)	For servo circuit.
Q103	2SD1944	Power supply (+5V)	For FL-indicator.
Q104	2SA1534A	Power supply (–30V)	For FL-indicator.
Q105 Q106	2SA1534A 2SC3940A	Buffer	Drive motor of VOLUME.
Q107 Q108	2SA1534A 2SC3940A	Buffer	Drive motor of tray.

DP-8020

CIRCUIT DESCRIPTION

Ref. No.	Part. No.	Use/Function	Operation/Condition/Compatibility
Q109	2SA1534A	Buffer	Drive feed motor.
Q110	2SC3940A		
Q111	2SA1534A	Buffer	Drive actuator of tracking.
Q112	2SC3940A		
Q113	2SA1534A	Buffer	Drive actuator of focusing.
Q114	2SC3940A		
Q115	2SA1534A	Buffer	Drive disk motor.

Q118	2SA11534A	Buffer	For laser diode and ALPC.
Q119	2SC1740S (Q, R) 2SC945 (A) (Q, R)	Switch	When focus servo is on FE BIAS circuit works.
Q201 Q202 Q203 Q204	2SC3666 2SA1426	Buffer	For head phone.

1-2. DISPLAY AND µ-COM UNIT (X25-3820-00)

Ref. No.	Part. No.	Use/Function	Operation/Condition/Compatibility
IC1	µPD75216ACW-295	Micro processor	(Refer to circuit description at page 22)
IC2	M51951ASL	Reset IC	For reset of micro processor.
Q1, 2	2SC1740S (Q, R) 2SC945 (A) (Q, R)	Buffer	For indicator of pin 1 and 9.
Q3, 4	DTA124EN	Buffer	For PAUSE LED.
Q5	DTA124EN	Buffer	For VOLUME LED.

CIRCUIT DESCRIPTION

2. CD player unit (X32-1500-22)

• Pickup carry circuit by linear motor

The speed sensor generates a voltage proportional to the moving speed of the pickup mount. More, since this voltage is yet low in level, it is amplified at IC109(1/2).

Therefore, the voltage at point Ⓐ becomes the signal standing for the moving speed of the pickup mount. This speed signal is inverted and amplified, and further the drive coil is driven so that the pickup amount is servo-controlled in respect to the moving speed.

The power OP amplifier of IC107(LA6500) is used to extend the dynamic range of driving the drive coil of the linear motor. The voltage at point Ⓑ serves as the moving speed reference of the pickup amount. In addition, the pickup amount moves at a speed proportional to the voltage at point Ⓑ.

Example: When the voltage at point Ⓑ is 0V, the pickup mount does not move, whereas when it is positive, the pickup mount moves inwards at a speed proportional to that voltage.

The voltage at point Ⓑ is the same as the voltage driving the pickup carry motor in a conventional mechanism and can be represented to a servo block diagram as shown in Figure 1. which manifests a direct feedback system.

Thus, if value A is sufficiently large, Ⓐ = Ⓑ.

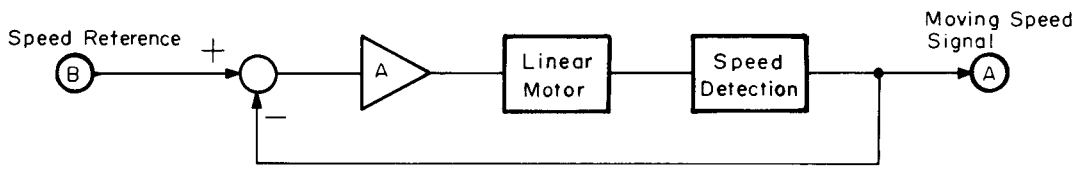

Fig. 1

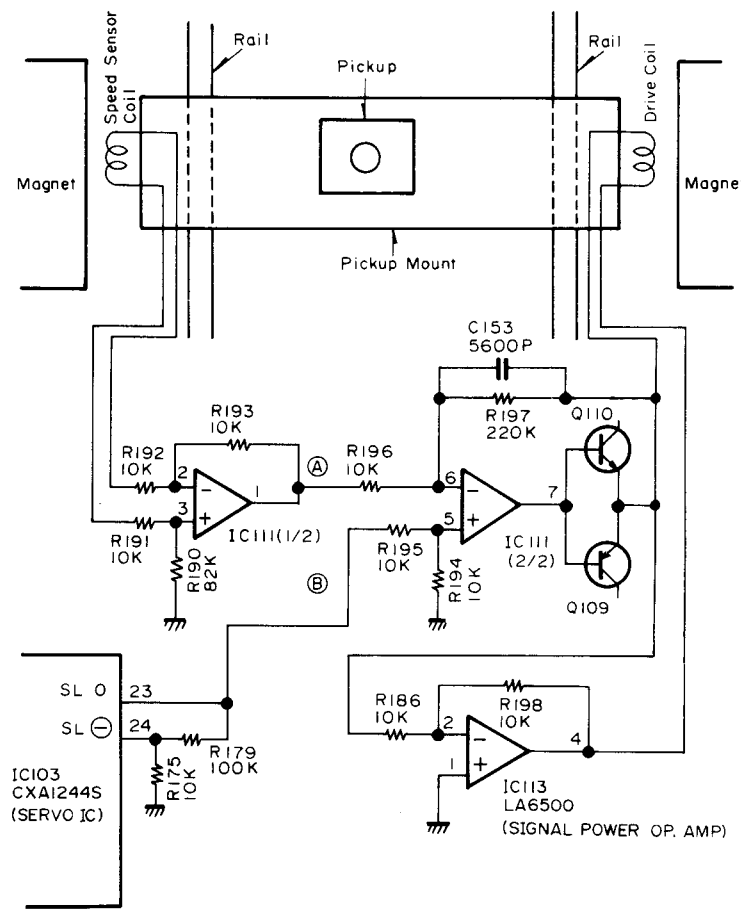

Fig. 2 Pickup carry circuit by linear motor

CIRCUIT DESCRIPTION

• D.P.A.C (Digital Pulse Axis Control) circuit

Two different distortions are attendant on the conversion of the digital signal into an analog signal. One is a distortion on the level axis (voltage axis), which is determined mainly by the resolution of the D/A converter, and in case of using a ladder resistor type, by its error.

The other is a distortion on the time axis, which is not so prevailing as to appear on the distortion meter but has great influence on the sound quality. It is the D.P.A.C that is to operate as a circuit to improve this point.

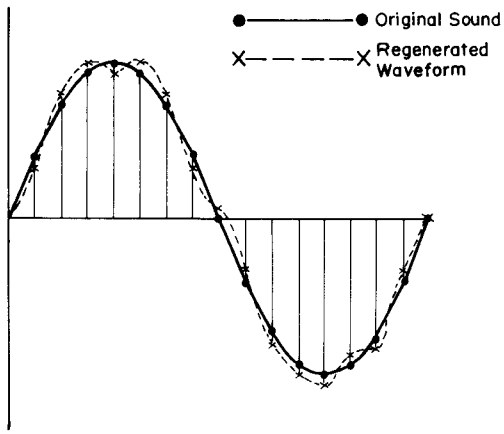

Fig. 3 Error (distortion) on voltage axis

Figure 3 shows the error (distortion) on the voltage axis of the D/A converter output for the original sound, and Figure 4 shows the error (distortion) on the time axis of the D/A converter output for the original sound.

As seen from this, even with a variation in time axis, there appears a regenerated waveform different from the original sound.

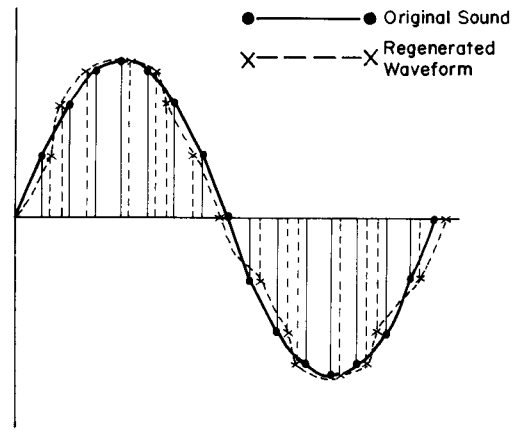

Fig. 4 Error (distortion) on time axis

• D.P.A.C by sample holding (S-H) circuit

The model of this time has the D.P.A.C circuit on the basis of an S-H circuit which has been more improved than the conventional D.P.A.C.

This new S-H circuit has the same composition as the conventional one. The difference between them is that the former uses the clock obtained by dividing the master clock for the sample holding signal which does not have jitters. This clock is converted into an analog signal, than its time axis corrected (its jitters are eliminated). The D/A conversion is carried out at 8 FS, but the sample holding clock is set to 16 FS. Accordingly , the noises generated in the S-H circuit is raised to 16 FS, thus the effects on the audio signal is minimized.

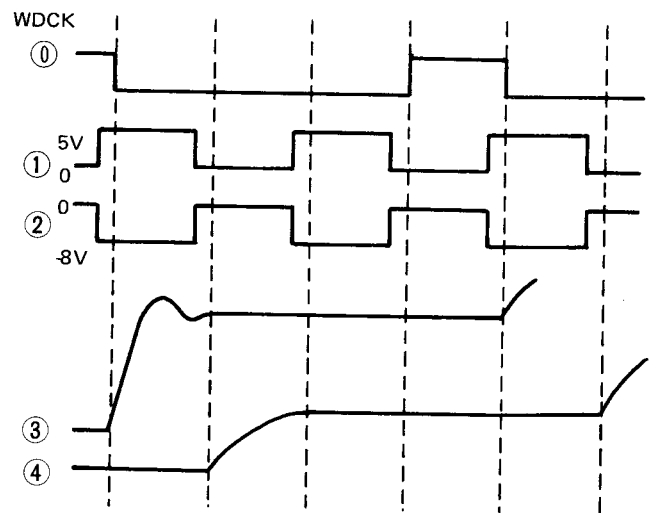

Fig. 5

CIRCUIT DESCRIPTION

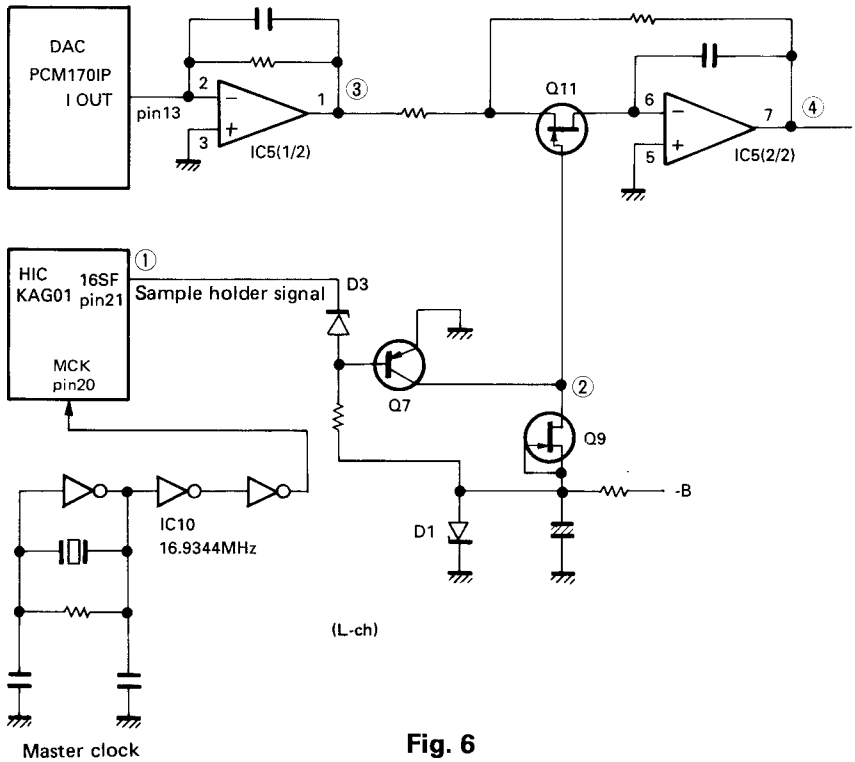

Fig. 6

• 20-bit D/A converter

This 20-bit D/A consists of a 18-bit D/A converter and additional external 2 bits [19SB and 20SB (LSB)].

If the data of 20 bits output from the digital filter are input as they are to the 18-bit DAC, 2- bits flow over. Accordingly, the data must be reduces by 2 bits. They are reduced by HIC and KAG01. HIC sends the 18-bit data, ranging from MSB to 18SB, to DAC (PCM 1701P).

Remaining 19SB and 20SB are detected and output in the conversion timing of DAC (WDCK), then they are weighed by resistance added to the output of DAC. By this operation, IC5 outputs 20bits.

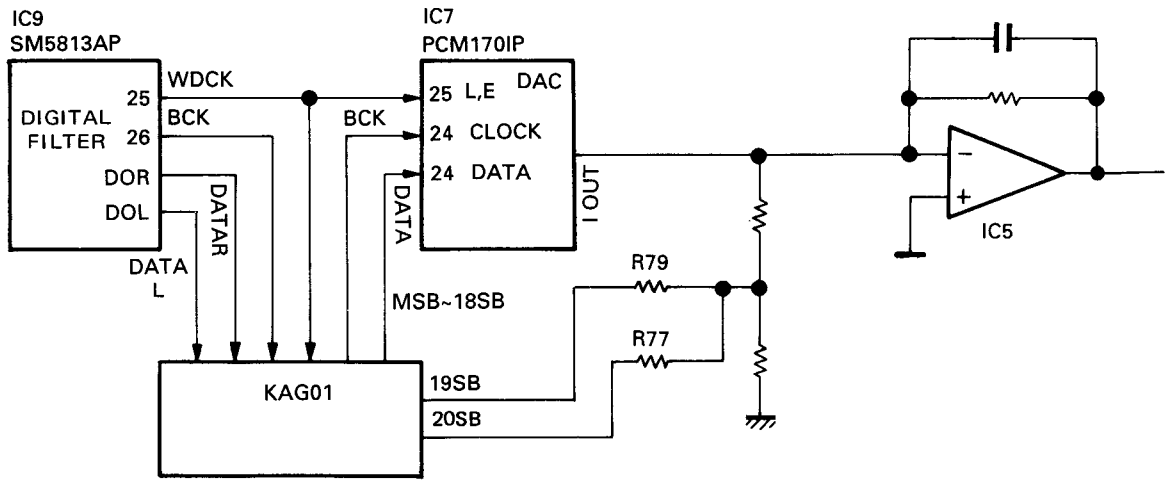

Fig. 7

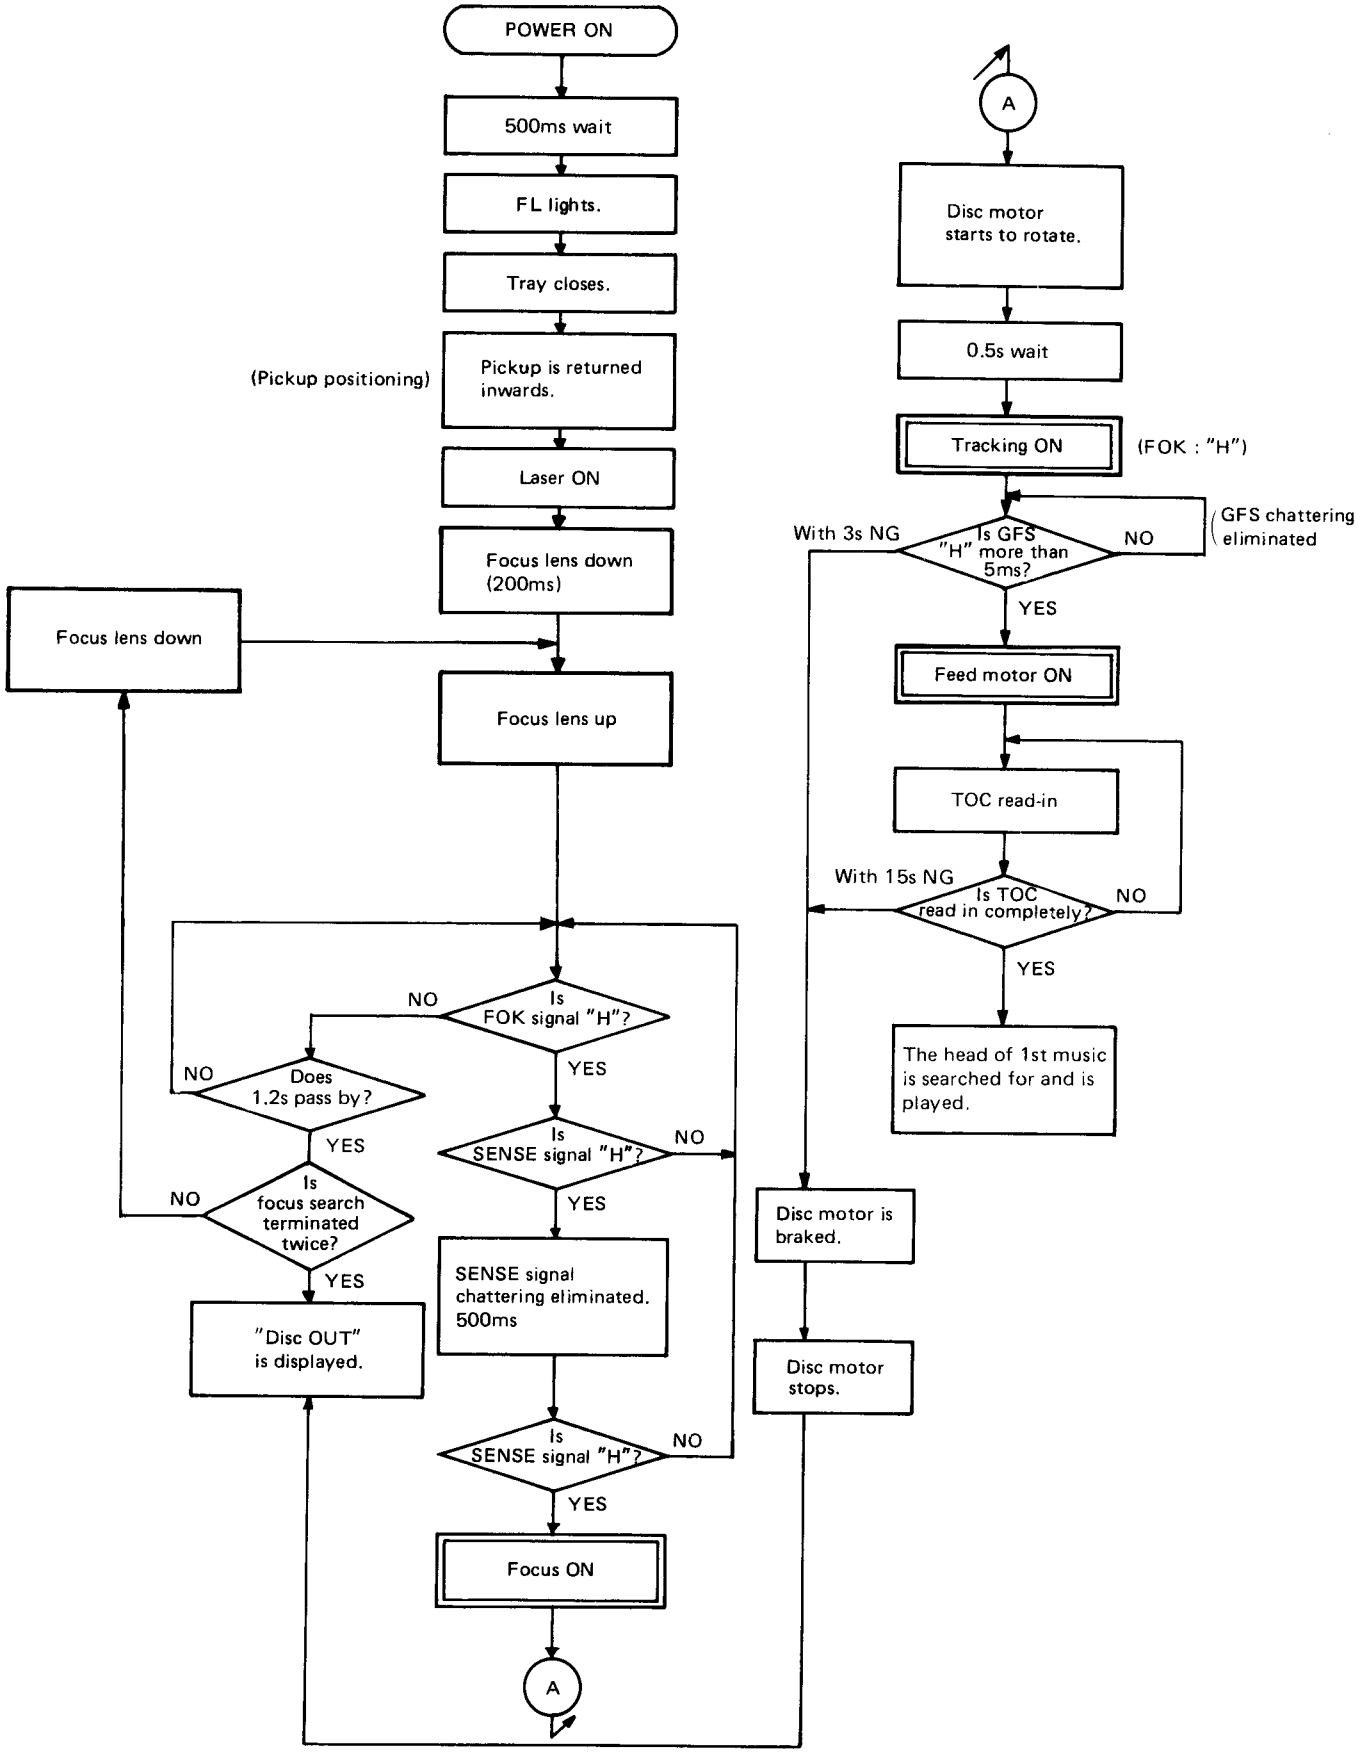
CIRCUIT DESCRIPTION

3. Set Mode Flowchart

3–1. Outline after POWER ON

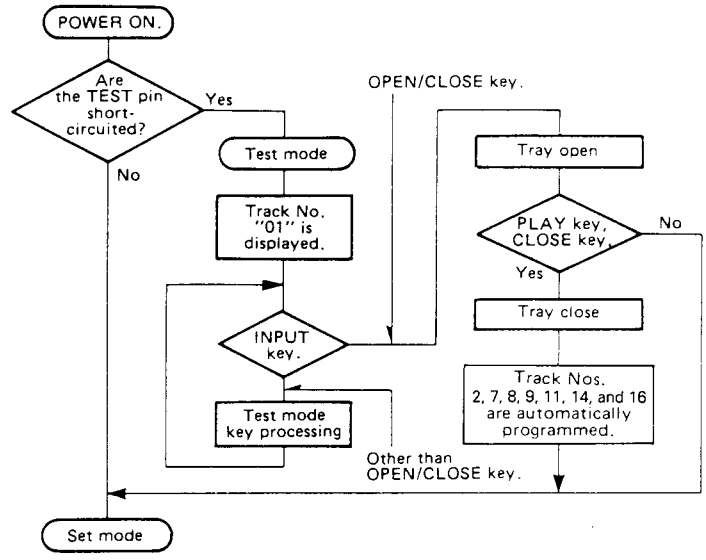


CIRCUIT DESCRIPTION

4. Test mode

With the DP-8020, the microprocessor can be set to test mode by short-circuiting pin 7 and pin 8 of the CD PLAYER UNIT (X32-1500).

Note : "Set mode" shows the normal status.



4-1. Key and functions valid in test mode

No.	Input key	Function	Track No. display
1	PLAY	(1) Focusing servo ..... ON (2) Tracking servo ..... ON (3) Feed servo ..... ON	TRACK NO. 05 PLAY (▶) Key lights Display for a few seconds after Disk track No.and time are displayed
2	STOP	Jamp to the first stop of TEST mode.	TRACK NO. 01
3	UP ▶▶|	(1) Focusing servo ..... ON (2) Tracking servo ..... OFF (3) Feed servo ..... OFF	TRACK NO. 03 PAUSE (❚❚) blinking P.C lights.
4	DOWN |◀◀	(1) Tray ..... Opened (2) Laser ..... ON The TEST mode goes on when the tray is closed by pressing the tray.	TRACK NO. 02 REPEAT lights
5	FF ▶▶	In the STOP mode, moves the pickup slightly toward the outer position of disc.	
6	FB ◀◀	In the STOP mode, moves the pickup slightly toward the inner position of disc.	
7	OPEN/CLOSE	When the tray is opened and the closed again in test mode, Track Nos 2, 7,8 9,11,14, and 16 are automatically programmed.	
8	DISPLAY OFF	All of FL's segments are light and PLAY and PAUSE indicator light.	

CIRCUIT DESCRIPTION

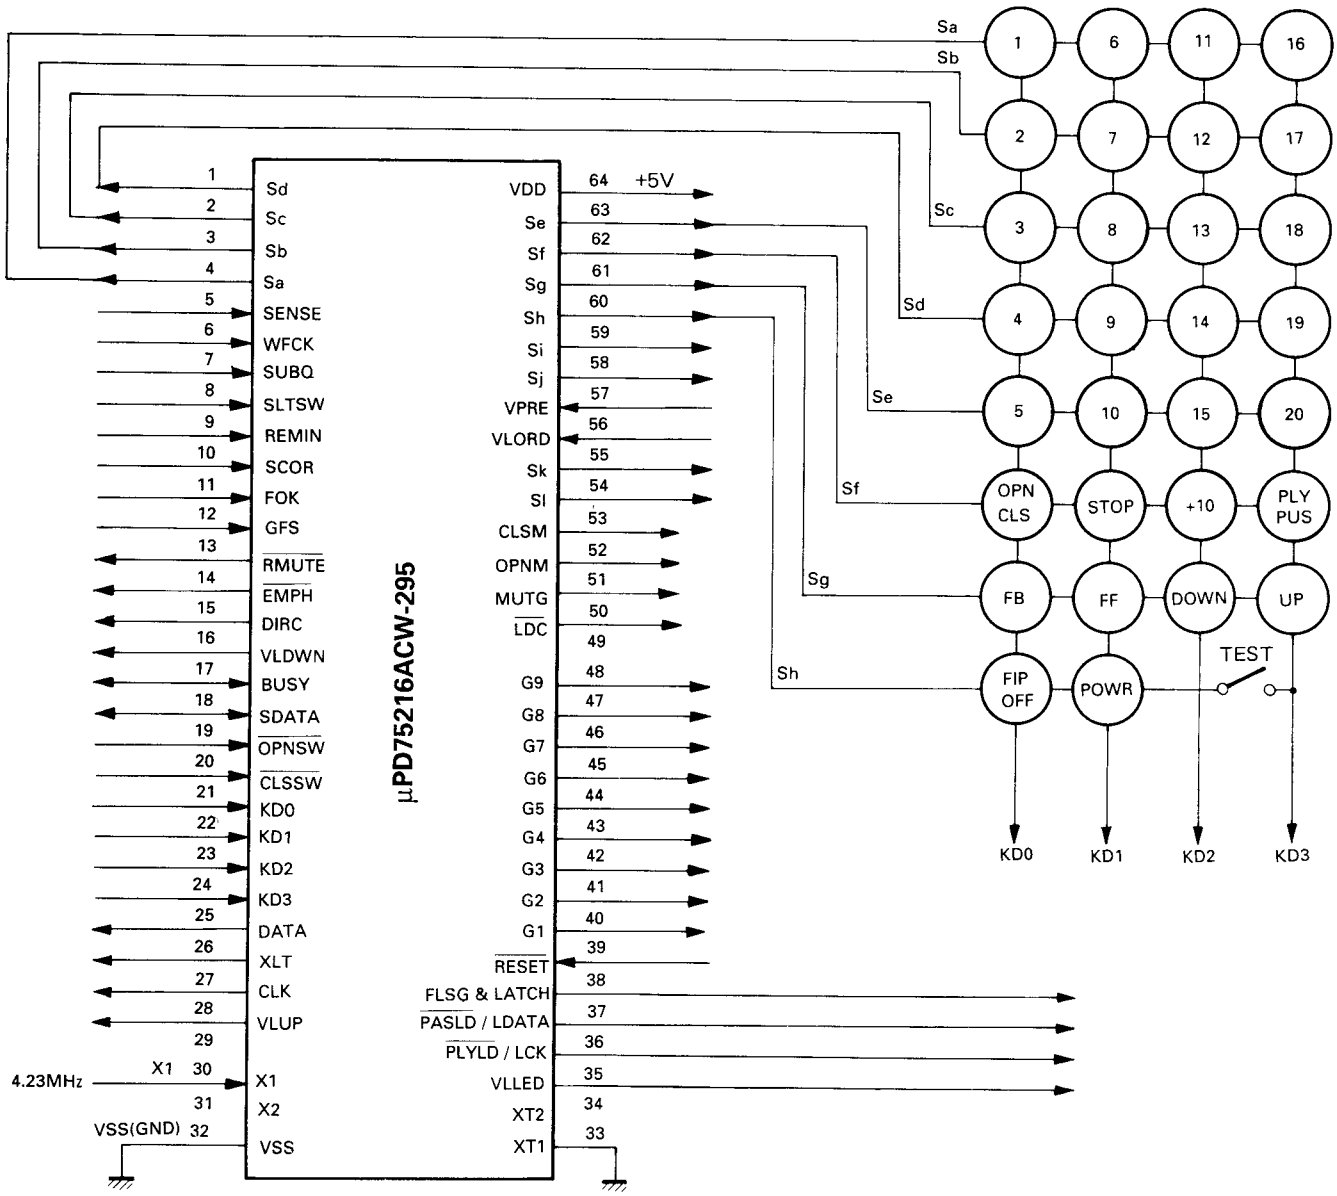
5–1. Terminal connection diagram



CIRCUIT DESCRIPTION

5–2. Explanation of terminals

Pin No.	Pin Name	I/O	Function
1~4	Pd~Pa	O	FL segment control pins (also for key signal).
5	SENSE	I	Signal processing, pin to detect the SENSE signal from servo IC.
6	WFCK	I	Q data read-out clock pulse input pin.
7	SUBQ	I	Q data input pin.
8	SLTSW	I	Pickup stops (STOP : "H").
9	RCI	I	Remoto control input pin.
10	SCOR	I	Sub-code frame sync detection signal input pin.
11	FOK	I	RF amplifier FOK signal input pin (At focus OK : "H").
12	GFS	I	Frame sync signal input pin (In frame sync : "H").
13	$\overline{\text{REMUTE}}$	O	Relay mutes (ON : "L").
14	$\overline{\text{EMPH}}$	O	De-emphasis control pin (ON : "L").
15	DIRC	O	Servo IC DIRC pin .
16	VLDWN	O	Volume control level goes down.
17	BUSY	I/O	BUSY signal of serial data. (System control)
18	SDATA	I/O	Data signal of serial data. (System control)
19	$\overline{\text{OPNSW}}$	I	Tray open switch (When open : "L").
20	$\overline{\text{CLSSW}}$	I	Tray close switch (When close : "L").
21~24	KD0-KD3	I	Key matrix key return input pins.
25	DATA	O	Signal processing, servo IC control output pin (Control data signall).
26	XLT	O	Signal processing, servo IC control output pin (Control data latch signal).
27	CLK	O	Signal processing, servo IC control output pin (Control data transmission clock signal).
28	VLUP	O	Volume control level goes up.
29	–	–	Unused.
30	X1	I	System clock pulse input pin.
31	–	–	Unused.
32	Vss	–	GND.
33	XTI	–	GND.
34	–	–	Unused.
35	VLLED	O	LED for positioning output level (Blink : LEVEL varia).
36	PLYLD	O	PLAY LED lights.
37	PASLD	O	PAUSE LED lights.
38	FLSG	O	Key scan signal when FL OFF (FL OFF : "H").
39	$\overline{\text{RESET}}$	I	Reset input pin (Active "L").
40~48	G1~G12	O	FL digit control pins.
49	N.C	–	Unused.
50	LCD	O	Signal for laser ON/OFF (Active "L").
51	MUTG	O	Muting signal for signal processor.
52	OPNM	O	Tray OPEN/CLOSE signal (Active "H").
53	CLSM		
54,55	SI,Sk	O	FL segment control pins (also for key scan signal).
56	VLOAD	I	FL driver negative power supply (–30V).
57	VREF	I	FL pre-driver negative power supply (–5V).
58~63	Pj~Pe	O	FL segment control pins (also for key scan signal).
64	VDD	–	Power supply (+5V).

CIRCUIT DESCRIPTION

6. RF AMP CXA1081S (X32-1500-22 : IC104)

General

The CXA1081S is an IC developed for use in Compact Disc players. It incorporates a 3-spot optical pickup RF output amplifier, a focusing error amplifier, a tracking error amplifier, and other signal processing circuitry, such as focus OK, mirror, defect, and EFM comparator circuits, as well as a laser diode APC (Automatic Power Control) circuit.

Features

- Operates on a signal +5 V power supply, as well as on a ±5 V dual-voltage power supply.
- Low power consumption (100 mW with ±5 V, 50 mW with +5 V).
- An APC circuit which accepts either a P-sub or N-sub laser diode.
- A minimum of external parts required.
- A disc defect detector circuit for improved playability.

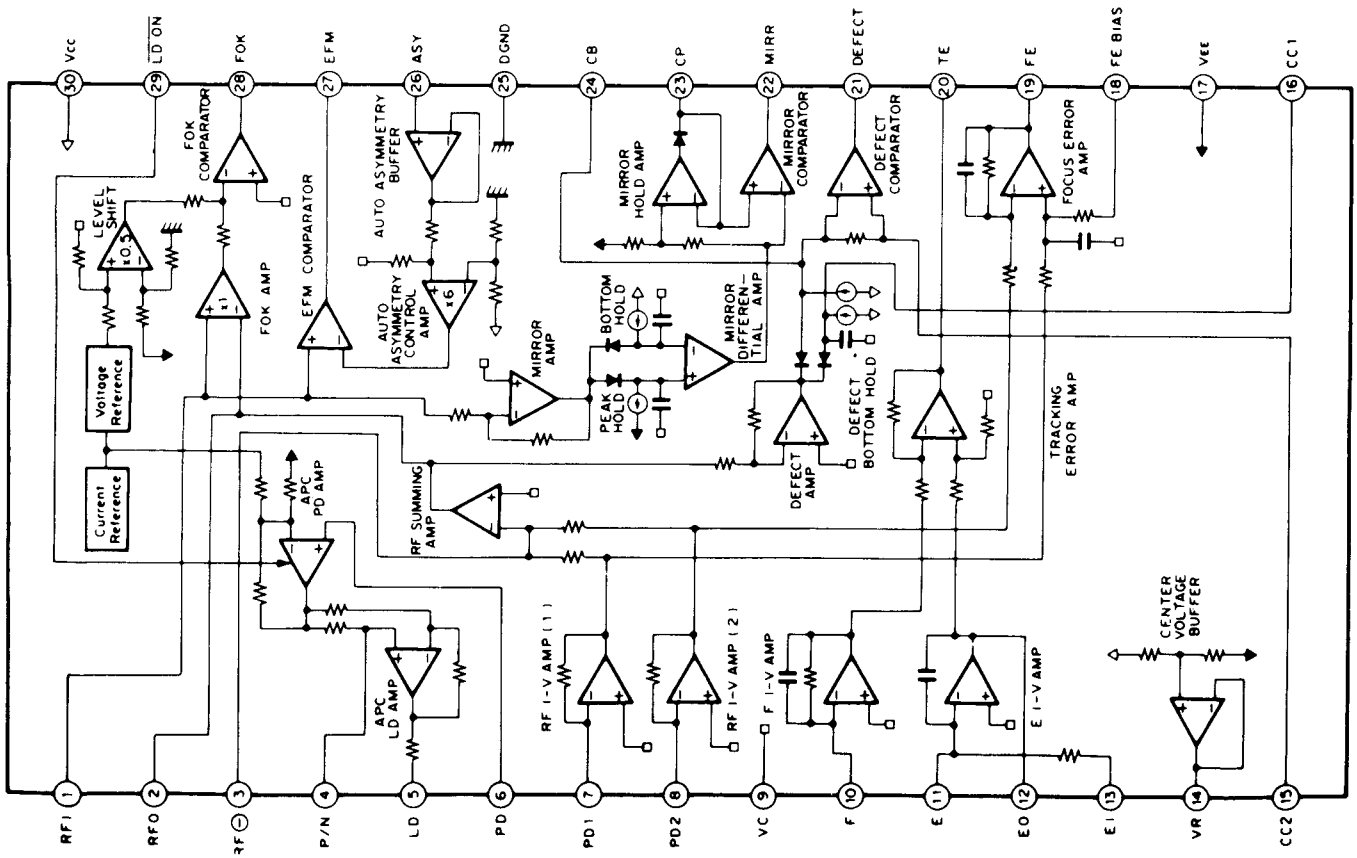
Structure

Bipolar silicon monolithic IC

Functions

- RF amplifier
- Focus OK detector circuit
- Mirror detector circuit
- Tracking error amplifier
- Defect detector circuit
- APC circuit
- EFM comparator
- Auto asymmetry control amplifier

6–1. Block diagram



CIRCUIT DESCRIPTION

6–2. Explanation of terminals (V_{CC}=2.5V, V_{EE}=D_{GND}=–2.5V, VC=GND)

Terminal No.	Terminal name	I/O	DC voltage (V)	Function
1	RFI	I	0	Input pin for the C-coupled signal output from the RF summing amplifier
2	RFO	O	V_{RFO}	RF summing amplifier output pin. Used as the check point for the eye pattern
3	RF⊖	I	0	RF summing amplifier feedback input pin.
4	P/N	I	0 (VC)	P-sub/N-sub select pin for the LD (Laser Diode) (DC voltage: in N-sub mode)
5	LD	O	–1.8	*APC LD amplifier output pin. (DC voltage: PD open in N-sub mode)
6	PD	I	0	*APC LD amplifier input pin. (DC voltage: open)
7	PD1	I	0	RF I-V amplifier (1) inverted input pin Current input by connecting to the photodiode A + C terminal
8	PD2	I	0	RF I-V amplifier (2) inverted input pin Current input by connecting to the photodiode B + D terminal
9	VC	–	0	Connected to GND when using a positive (+)/negative (–) dual-voltage power supply Connected to VR (pin 14) when using a single-voltage power supply
10	F	I	0	F I-V amplifier inverted input pin Current input by connecting to the photodiode F terminal
11	E	I	0	E I-V amplifier inverted input pin Current input by connecting to the photodiode E terminal
12	EO	O	0	E I-V amplifier output pin
13	EI	I	0	E I-V amplifier feedback input pin. For E I-V amplifier gain adjustment
14	VR	O	V_{CVO}	DC voltage output pin of (V_{CC} + V_{EE})/2
15	CC2	I	1.0	Input pin for the C-coupled signal output from the defect bottom hold
16	CC1	O	1.2	Defect bottom hold output pin
17	V_{EE}	–	–2.5	Connected to the negative power supply when using a positive (+)/negative (–) dual-voltage power supply. Connected to GND when using a single-voltage power supply
18	FE BIAS	I	0	Bias pin on the focus error amplifier non-inverted side For CMR adjustment of the focus error amplifier.
19	FE	O	V_{FEO}	Focus error amplifier output pin
20	TE	O	V_{TEO}	Tracking error amplifier output pin
21	DEFECT	O	V_{DFCT}	Defect comparator output pin (DC voltage: connected to a 10 k-ohm load)
22	MIRR	O	V_{MIRI}	Mirror comparator output pin (DC voltage: connected to a 10 k-ohm load)
23	CP	I	–1.3	Mirror hold capacitor output pin. Mirror comparator non-inverted input.
24	CB	I	0	Defect bottom hold capacitor connect pin.
25	DGND	–	–2.5	Connected to GND when using a positive (+)/negative (–) dual-voltage power supply Connected to GND (V_{EE}) when using a single-voltage power supply.
26	ASY	I	–	Auto asymmetry control input pin.
27	EFM	O	V_{EFMH}	EFM comparator output pin. (DC voltage: connected to a 10 k-ohm load)
28	FOK	O	V_{FOKL}	FOK comparator output pin. (DC voltage: connected to a 10 k-ohm load)
29	LD ON	I	–2.5 (DGND)	LD ON/OFF select pin. (DC voltage: when LD ON)
30	V_{CC}	–	2.5	Positive power supply.

*APC: Automatic Power Control

CIRCUIT DESCRIPTION

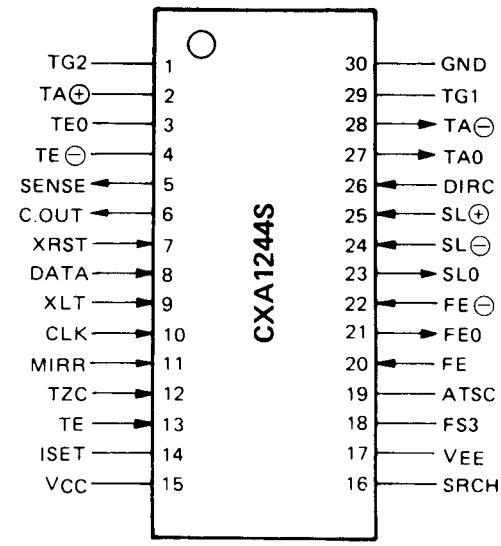
7. Servo control CXA1244S (X32-1500-22 : IC103)

CXA1244S is a bipolar IC developed for servo of compact disc (CD) players, and it provides the following functions.

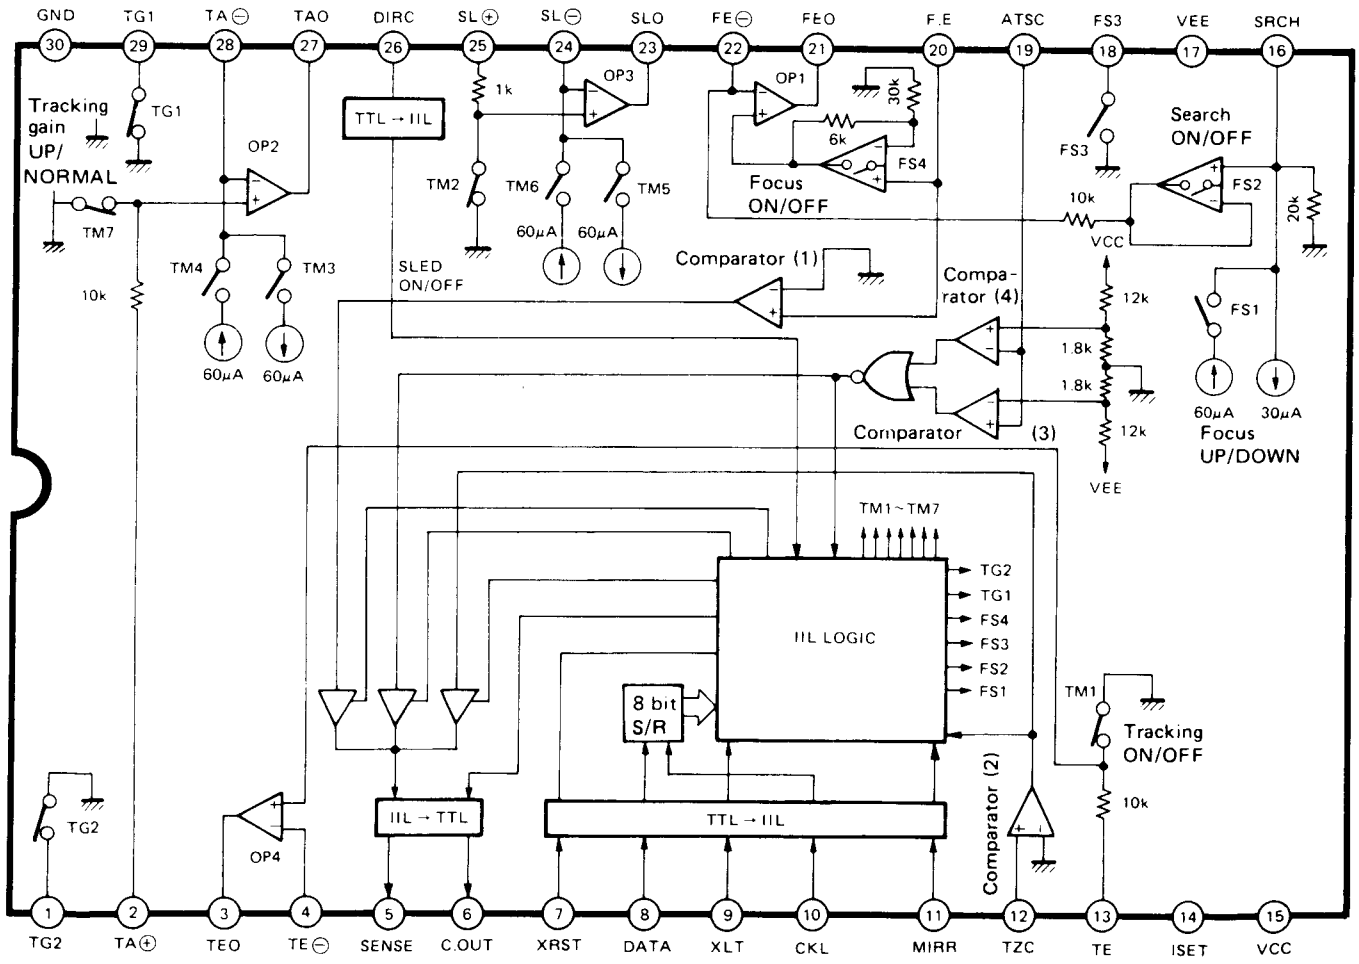
- ○Focus control (search ON/OFF, gain control)
- ○Tracking control (servo ON/OFF, single track jump, multiple track jump, gain control, phase compensation control, brake circuit)
- ○ Sled control (servo ON/OFF, fast forward, fast reverse)

Servo function of each of focus, tracking and sled as well as random access operation are realized through control by microcomputer. Furthermore, the serial data bus can be shared with CXD1125Q.

7–1. Terminal connection diagram



7–2. Block diagram



CIRCUIT DESCRIPTION

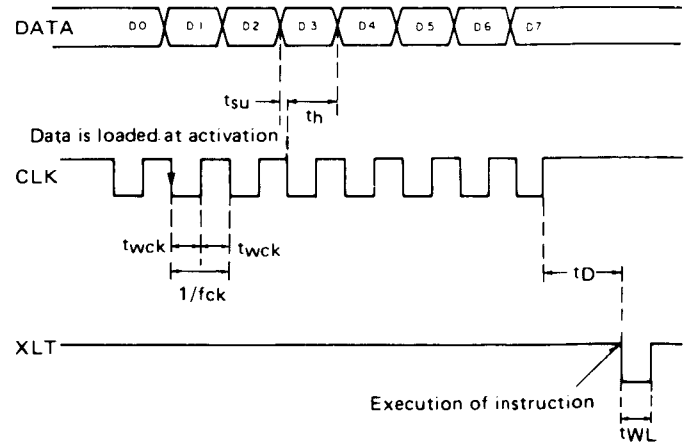
7–3. Explanation of terminals

Terminal No.	Terminal name	I/O	Functions
1	TG2		Tracking amplifier gain switching terminal. GND level.
2	TA ⊕		Non-inverted input of operational amplifier 2.
3	TE0		Output of operational amplifier 4.
4	TE ⊖	O	Inverted input of operational amplifier 4.
5	SENSE	O	Output of SSP internal status that corresponds to ADDRESS of CPU → SSP. (Changes in accordance with ADDRESS content of internal serial register.) See Note 1.
6	C. OUT	O	Signal output for counting number of tracks at the time of high speed access.
7	XRST	I	All internal registers are cleared when CPU → SSP "L". Connected with CPU RESET. See Note 2.
8	DATA	I	Serial data transmission of CPU → SSP. Input is made from LSB. D0~D7.
9	XLT	I	Latch of serial data of CPU → SSP. (The contents of internal serial register are transmitted to each address decoded latch.) Transmission at "L". Change to "H" occurs immediately after execution because no edge trigger is produced.
10	CLK	I	CPU → SSP serial data transmission clock. Data is read at falling. "H" level before and after transmission.
11	MIRR	I	Mirror signal input from RF amplifier.
12	TZC	I	Tracking error signal is input with C couple. The time constant is determined by one single track jump, but it is usually around 2kHz.
13	TE	I	Tracking error signal input.
14	ISET		Setting of current level for determining focus search voltage, tracking jump voltage and sled feed voltage.
15	Vcc		Power supply terminal. Normally −5V.
16	SRCH		The capacitor for determining the time constant of charge/discharge waveform for focus search is connected.
17	VEE		Power supply terminal. Normally −5V.
18	FS3		Focus amplifier gain switching terminal. GND level.
19	ATSC		Such information that a mechanical shock was applied to the player is input. Simply, a trakcing error is input through B.P.F.
20	FE	I	Input of focus error signal.
21	FE0	O	Output of operational amplifier 1.
22	FE ⊖	I	Inverted input of operational amplifier 1.
23	SL0	O	Output of operational output 3.
24	SL ⊖	I	Inverted input of operational amplifier 3.
25	SL ⊕	I	Non-inverted input of operational amplifier 3.
26	DIRC	I	Used at the time of one track jump. Normally "H". The direction of the track jump pulse is reversed with "L". Setting is made in the normal tracking mode by changing to "H" "L" for a fixed length of time with detection of activation, deactivation of TZC.
27	TA0	O	Output of operational amplifier 2.
28	TA ⊖	O	Inverted input of operational amplifier 2.
29	TG1		Tracking amplifier gain switching terminal. GND level.
30	GND		GND terminal of IC.

Note 1 : SENSE terminal output

Serial data upper 4 bits	ADDRESS content	SENSE terminal output	Explanation
0 0 0 0	FOCUS CONTROL	FZC	"H" when focus zero cross. Focus erro vol tage is 0V or higher. Used at the time of FOCUS PULL opera tion.
0 0 0 1	TRACKING CONTROL	AS	"H" when the ATSC input level exceeds the wind comparator level (VTH = ±Vcc x 13%). But this is not used in this equipment.
0 0 1 0	TRACKING MODE	TZC	Judgement output of positive or negative of tracking zero cross. tracking error. When used at the time of single track jump, DIRC is reduced to "L" on detection of TZC ↑, in FWD JUMP or on detection of TZC ↓ in REV JUMP.

Note 2 : Digital unit timing chart



CIRCUIT DESCRIPTION

CIRCUIT DESCRIPTION

8. Digital signal processor CXD1165Q(X32-1500-22 : IC11)

General

The CXD1165Q is a digital signal processing LSI for a Compact Disc player, and has the following functions.

1. Bit clock reproduction by an EFM-PLL circuit
2. EFM data demodulation
3. Frame sync signal detection, protection and insertion
4. Powerful error detection and correction
5. Interpolation with an average value, or by holding the previous value
6. Demodulation of a sub code signal, error detection of a sub code Q
7. Spindle motor CLV servo
8. 8-bit tracking counter
9. CPU interface with a serial bus
10. Sub code Q register
11. Digital audio interface output.
12. RAM the entrails.

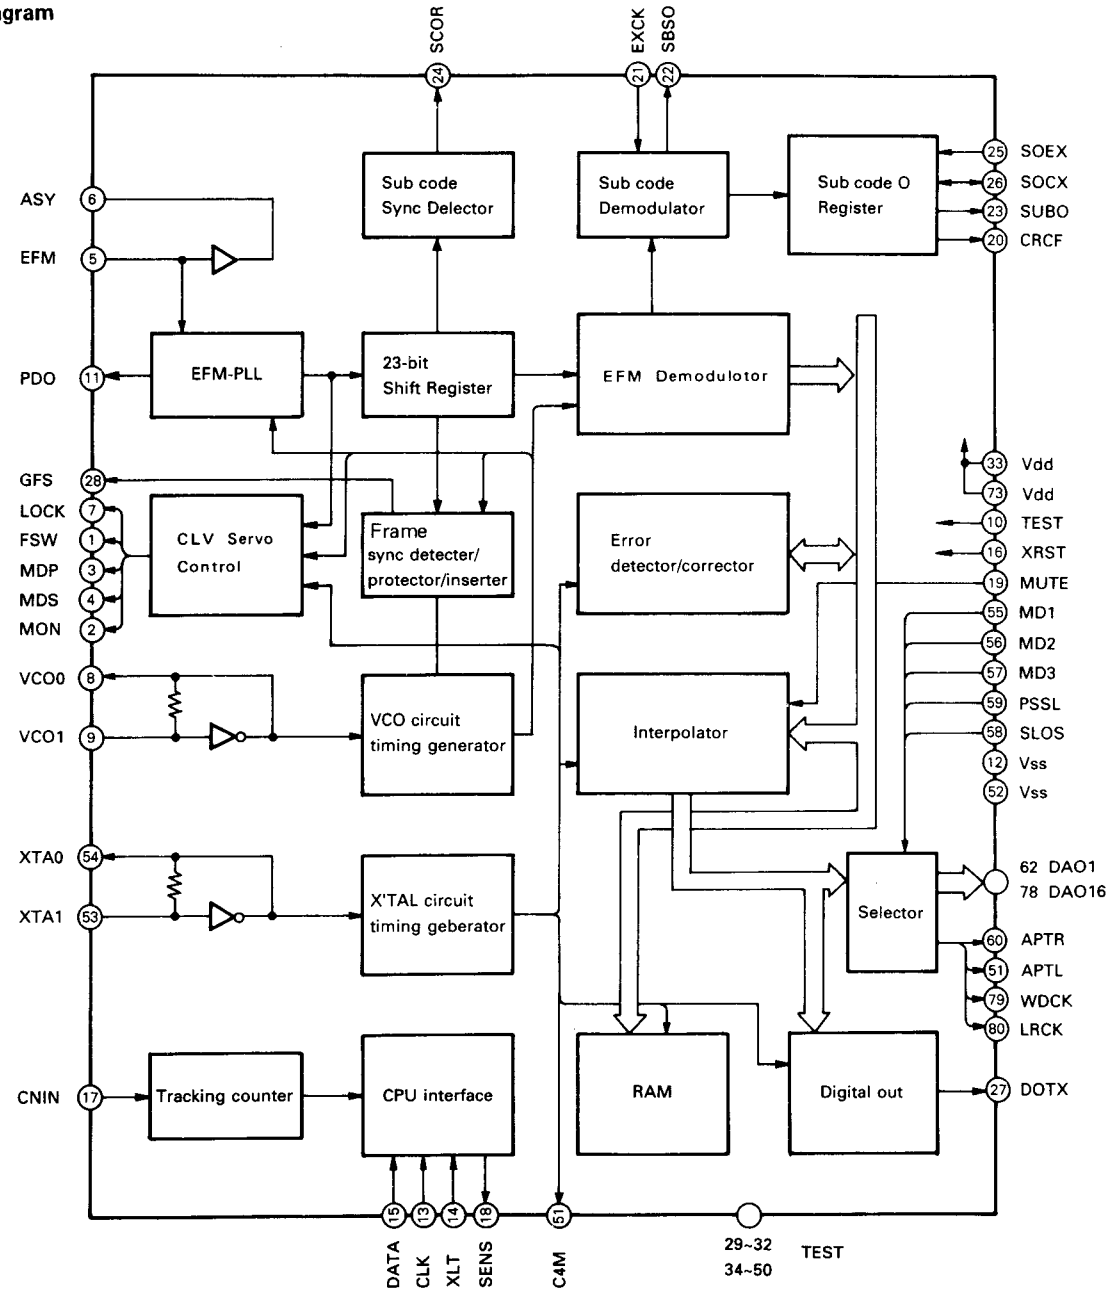
Features

- All digital signals used in playback can be processed using only a single chip.
- An aperture-correction digital filter is built in

Structure

CMOS IC

8–1. Block diagram



CIRCUIT DESCRIPTION

8–2. Explanation of terminals

Terminal No.	Terminal name	I/O	Function
1	FSW	O	Time constant switching output of output filter of spindle motor
2	MON	O	ON/OFF control output of spindle motor
3	MDP	O	Drive output of spindle motor. Rough speed control in CLV-S mode and phase control in CLV-P mode
4	MDS	O	Drive output of spindle motor. Speed control in CLV-P mode
5	EFM	I	EFM signal input from RF amplifier
6	ASY	O	Output for controlling the slice level of EFM signal
7	LOCK	O	Samples the GFS signal with WFCK/16, and outputs "H" when the level is high. When it is "L" for eight times, in arrow, outputs "L"
8	VCOO	O	VCO output. f = 8.6436 MHz when locked to EFM signal
9	VCOI	I	VCO input
10	TEST	I	(0 V)
11	PDO	O	Phase comparison output of EFM signal and VCO/2
12	V_{SS}	—	GND (0 V)
13	CLK	I	Serial data transmission clock input from CPU. Data is latched at rising edge of a clock
14	XLT	I	Latch input from CPU. Data (serial data from CPU) from the 8 bit shift register is latched in each register
15	DATA	I	Serial data input from CPU
16	XRST	I	System reset input. Reset at "L"
17	CNIN	I	Input of tracking pulse
18	SENS	O	Output of internal status in correspondence to the address
19	MUTG	I	Muting input. In the case when ATTM of internal register A is "L". Normal status when MUTG is "L" or soundless state when it is "H"
20	CRCF	O	Output of result of CRC check of sub code Q
21	EXCK	I	Clock input for sub code serial output
22	SBSO	O	Sub code serial output
23	SUBQ	O	Sub code Q output
24	SCOR	O	Sub code sync S0 + S1 output
25	SQCK	I/O	Sub code Q read-off clock
26	SQEX	I	SQCK select input
27	DOTX	O	DIGITAL OUT output. (Outputs the $\overline{WFCK}$ signal when CXD1130Q or D0 is off)
28	GFS	O	Display output of frame sync lock status
29	DB08	I/O	H or L position. Don't open circuit.
30	DB07	I/O	H or L position. Don't open circuit.
31	DB06	I/O	H or L position. Don't open circuit.
32	DB05	I/O	H or L position. Don't open circuit.
33	V_{DD}	—	Power supply (+ 5 V)
34	DB04	I/O	H or L position. Don't open circuit.
35	DB03	I/O	H or L position. Don't open circuit.
36	DB02	I/O	H or L position. Don't open circuit.
37	DB01	I/O	H or L position. Don't open circuit.
38	RA01	O	H or L position. Don't open circuit.
39	RA02	O	H or L position . Don't open circuit.
40	RA03	O	H or L position. Don't open circuit.
41	RA04	O	H or L position. Don't open circuit.
42	RA05	O	H or L position. Don't open circuit.
43	RA06	O	H or L position. Don't open circuit.

CIRCUIT DESCRIPTION

Terminal No.	Terminal name	I/O	Function
44	RA07	O	H or L position. Don't open circuit.

49	RAWE	O	H or L position. Don't open circuit.
50	RACS	O	H or L position. Don't open circuit.
51	C4M	O	Crystal dividing output f = 4.2336 MHz
52	V_{SS}	–	GND (0 V)
53	XTAI	I	Crystal oscillator input f = 8.4672 MHz or 16.9344 MHz depending on the mode selected
54	XTAO	O	Crystal oscillator output f = 8.4672 MHz or 16.9344 MHz depending on the mode selected
55	MD1	I	Mode select input 1
56	MD2	I	Mode select input 2
57	MD3	I	Mode select input 3
58	SLOB	I	Audio data output code select input 2's complement output when "L", offset binary output when "H"
59	PSSL	I	Audio data output mode select input Serial output when "L", parallel output when "H"
60	APTR	O	Aperture compensation control output "H" when R-ch
61	APTL	O	Aperture compensation control output "H" when L-ch
62	DA01	O	DA01 (parallel audio data LSB) output when PSSL = "H", C1F1 output when PSSL = "L"
63	DA02	O	DA02 output when PSSL = "H", C1F2 output when PSSL = "L"
64	DA03	O	DA03 output when PSSL = "H", C2F1 output when PSSL = "L"
65	DA04	O	DA04 output when PSSL = "H", C2F2 output when PSSL = "L"
66	DA05	O	DA05 output when PSSL = "H", C2FL output when PSSL = "L"
67	DA06	O	DA06 output when PSSL = "H", C2PO output when PSSL = "L"
68	DA07	O	DA07 output when PSSL = "H", RFCK output when PSSL = "L"
69	DA08	O	DA08 output when PSSL = "H", WFCK output when PSSL = "L"
70	DA09	O	DA09 output when PSSL = "H", $\overline{\text{PLCK}}$ output when PSSL = "L"
71	DA10	O	DA10 output when PSSL = "H", UGFS output when PSSL = "L"
72	DA11	O	DA11 output when PSSL = "H", GTOP output when PSSL = "L"
73	V_{DD}	–	Power supply (+5 V)
74	DA12	O	DA12 output when PSSL = "H", RAOV output when PSSL = "L"
75	DA13	O	DA13 output when PSSL = "H", C4LR output when PSSL = "L"
76	DA14	O	DA14 output when PSSL = "H", $\overline{\text{C21O}}$ output when PSSL = "L"
77	DA15	O	DA15 output when PSSL = "H", C21O output when PSSL = "L"
78	DA16	O	DA16 (parallel audio data MSB) output when PSSL = "H", DATA output when PSSL = "L"
79	WDCK	O	Strobe signal output 176.4 kHz when DF is ON, 88.2 kHz with CXD1125Q or when DF is OFF
80	LRCK	O	Strobe signal output 88.2 kHz when DF is ON, 44.1 kHz with CXD1125Q or when DF is OFF

Notes:

C1F1 :
C1F2 : Error correction status monitor output for C1 decode.

C2F1 :
C2F2 : Error correction status monitor output for C2 decode.

C2FL : Correction status output. Goes "H" when the currently corrected C2 series data cannot be corrected.

C2PO : C2 pointer signal. Synchronized to the audio data output.

RFCK : Read frame clock output. 7.35 MHz when locked to the crystal line.

WFCK: Write frame clock output. 7.35 MHz when locked to the crystal line.

$\overline{\text{PLCK}}$: VCO/2 output. f = 4.3218 MHz when locked to the EFM signal.

UGFS : Non-protected frame sync pattern output.

GTOP : Frame sync protect status display output.

RAOV : ±4 frame jitter absorption RAM overflow and underflow display output.

C4LR : Strobe signal. 352.8 kHz when DF is ON, 176.4 kHz with CXD1125Q or when DF is OFF.

BLCK : Output of bit clock. 2.1168MHz

$\overline{\text{BLCK}}$: Inverted output bit clock.

DATA : Audio signal serial data output.

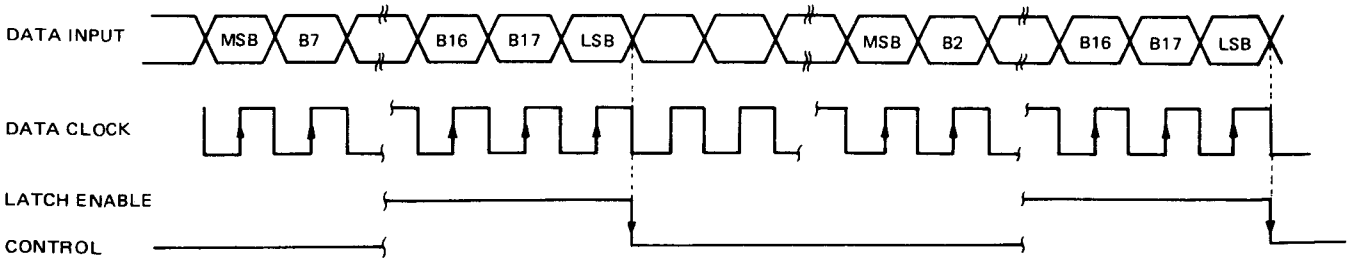
9-3. Timing chart



- The data format is of 2's complement, right-justified or continuous data of MSB first.
- Data is taken in to the shift register at the rise of the data clock pulse.

CIRCUIT DESCRIPTION

10. 8x over-sampling digital filter SM5813AP (X32-1500-22 : IC9)

10-1. Function

- 2-channel processing
- 8x over-sampling (interpolation) filter
  (hereinafter referred to as 8fs for short)
- Serial input data
  2's complement, MSB first
  16-bit
- Serial output data
  MSB first
  2's complement/COB selectable
  Selectable between 16-, 18- and 20-bit
- Jitter-free
  Prevents any faulty operation due to the jitter of the input clock signal, thus eliminating the jitter transmission over to the output.
- System clock pulse
  Selectable from 192fs, 256fs, 384fs and 512fs
- Crystal oscillation circuit incorporated
- I/O TTL compatible
- 5 V single power supply
- 28-pin plastic DIP

10-2. Filter configuration

- Interpolation filter
  Linear phase FIR filter 3-stage configuration
  First stage (fs — 2fs), 153rd
  Second stage (2fs — 4fs), 29th
  Third stage (4fs — 8fs), 17th
- 22-bit filter coefficient, 20x22 bit parallel multiplier/25-bit accumulator high-accuracy operation
- Overflow limiter incorporated

10-3. Applications

- CD playback
- DAT playback
- PCM playback

10-4. Filter characteristics

Characteristic item	Performance
Pass band	0 ~ 0.4535fs
Reject band	0.5465fs ~ 7.4535fs
Pass band ripple	Within ±0.00005dB
Reject band attenuation	More than 110dB
Group delay time	Fixed

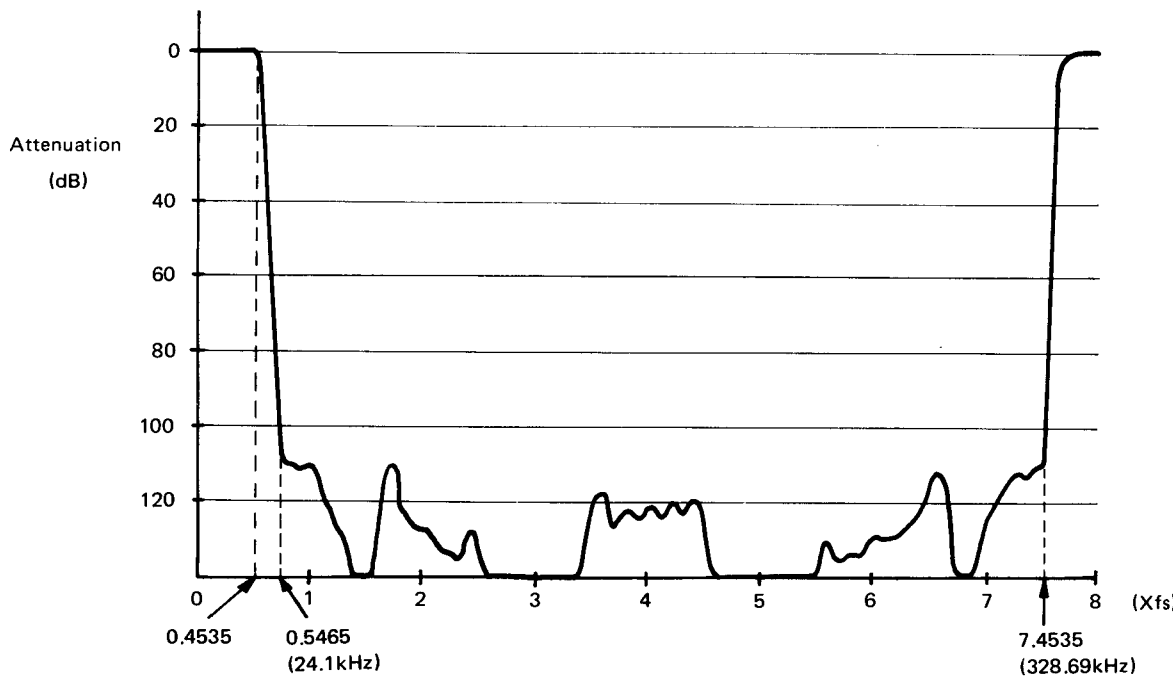


Fig. 8 Frequency response

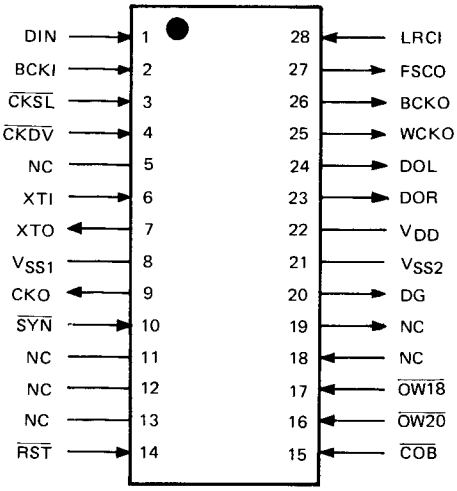
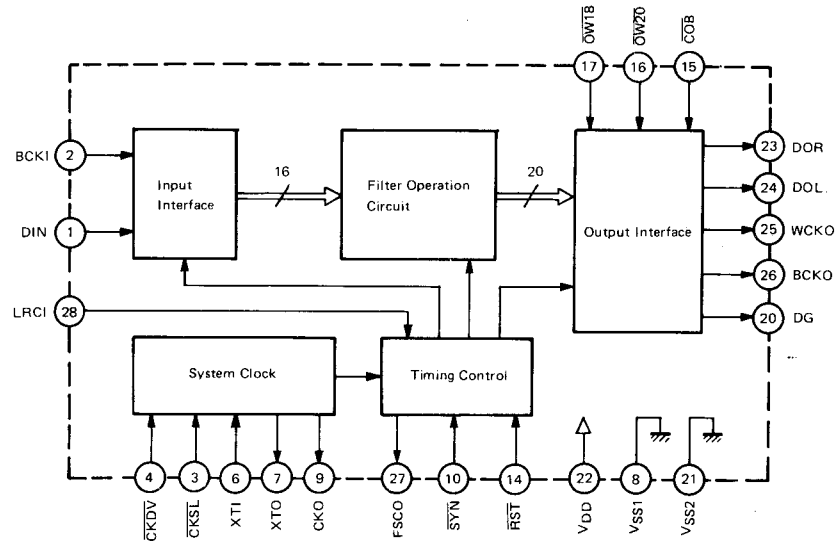
CIRCUIT DESCRIPTION

10–5 Terminal connection diagram



10–6 Block diagram



10–7. Explanation of terminals

"fs" occurring in the description means the sampling frequency of the input data.

Pin No.	Pin Name	I/O	Function
1	DIN	I	Input data.
2	BCKI	I	Input data beat clock pulse.
3,4	CKSL, CKDV	I	XTI pin input frequency selection. (For details, refer to the description of XTI pin.)
5	NC	–	Unused.
6	XTI	I	Oscillator section input pin. 192 fs : CKSL = "H", CKDV = "H" 256 fs : CKSL = "H", CKDV = "L" 384 fs : CKSL = "L", CKDV = "H" 512 fs : CKSL = "L", CKDV = "L"
7	XTO	O	Oscillator section output pin.
8	VSS1	–	GND1.
9	CKO	O	Oscillator section output clock pulse. (Frequency is the same as in XTI pin.)
10	SYN	I	Jitter-free mode/compulsory sync mode selection. ("H : Jitter-free mode, "L" : Compulsory sync mode)
11~13	NC	–	Unused.
14	RST	I	System reset. ("H" : normal operation, "L" : system reset)
15	COB	I	2's complement/COB selection. ("H" : 2's complement, "L" : COB)
16,17	OW20, OW18	I	Number-of-output-bits selection. No. of output bits: 16 (OW18 H, OW20 H); 18 (OW18 L, OW20 H); 20 (OW18 H, OW20 L)
18,19	NC	–	Unused.
20	DG	O	Deglitch control clock pulse.
21	VSS2	–	GND2.
22	VDD	–	Power supply (+5V).
23	DOR	O	Rch 8x over-sampling output data.
24	DOL	O	Lch 8x over-sampling output data.
25	WCKO	O	Output data word clock pulse.
26	BCKO	O	Output data bit clock pulse.
27	FSCO	O	fs-period internal operation timing clock pulse.
28	LRCI	I	Input data sampling rate (fs) clock pulse. ("H" : Lch, "L" : Rch)

CIRCUIT DESCRIPTION

10-8. Function

• 8x over-sampling (interpolation) filter function

This function works to output the over-sampling data of sampling rate 8fs. In this case, sampling noises between 0.5465fs (24.1kHz) and 7.4535fs (328.69kHz) are removed.

The interpolation operation block configuration of this LSI is of a cascade connection of three 2x interpolation filters (FIR).

• System clock (XTI, XTO, CKO, $\overline{\text{CKSL}}$, $\overline{\text{CKDV}}$)

The system clock pulse can be selected from 192fs, 256fs, 384fs and 512fs. More, operation is feasible even by an external clock (input to pin XTI) or a crystal oscillator (inserted between pins XTI and XTO). In this unit, a clock pulse of 8.4672 MHz is input to pin XTI.

From pin CKO, the system clock pulse is output. (See Figure 10.)

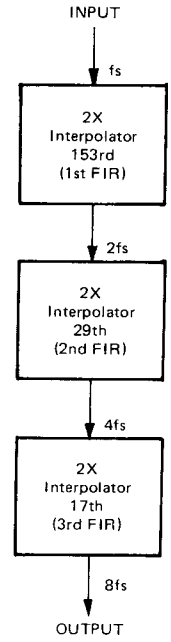


Fig. 9 Configuration of basic operation section

$\overline{\text{CKDV}}$		H		L	
$\overline{\text{CKSL}}$		H	L	H	L
XTI input clock frequency (Fxi)	Fxi = 1/tXI	192fs	256fs	384fs	512fs
Clock pulse input method		External clock (input to pin XTI) or internal clock (a crystal oscillator inserted between pin XTI and XTO).			
Internal system clock pulse period	Tsys	tXI		2*tXI	

tXI stands for the XTI input clock pulse period.

Table 10–1 System clock frequency selection and internal system clock

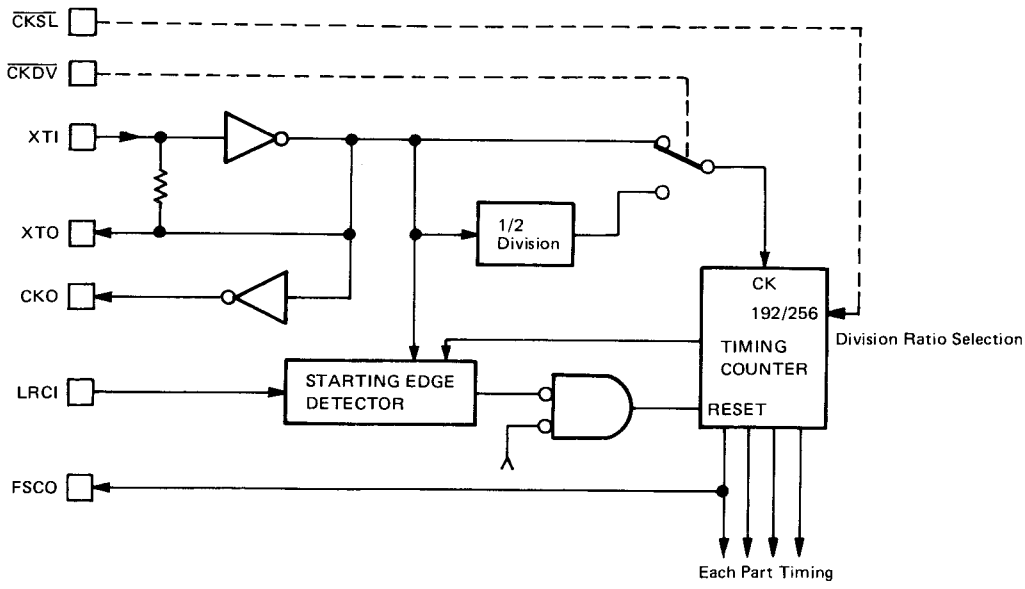

Fig. 10 Clock generation circuit

CIRCUIT DESCRIPTION

• Auto data input (DIN, BCKI, LRCI)

The input data is handled as being of 2's complement, MSB first. Each bit of the serial data input to pin DIN is read in to register SIPO (serial/parallel conversion register) a the leading edge of bit clock pulse BCKI, in which it is in turn converted into a parallel data. The output of SIPO is transferred to each of the Lch and Rch input registers at the trailing/leading edge of clock pulse LRCI.

In addition, the operation section and the output section are independent in signal timing from the input section and are therefore unsusceptible to the jitter of the input section. (Jitter-free mote: For details, refer to the description occurring later.)

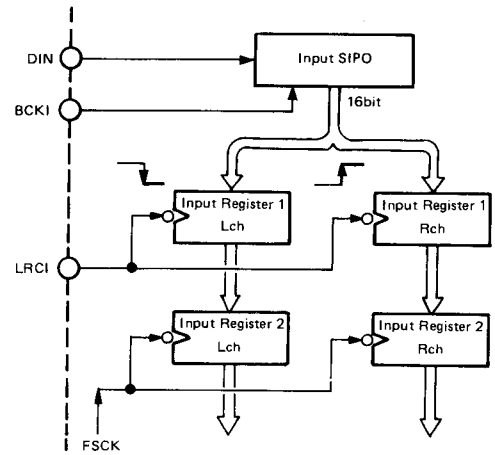

Fig. 11 Configuration of audio data input section

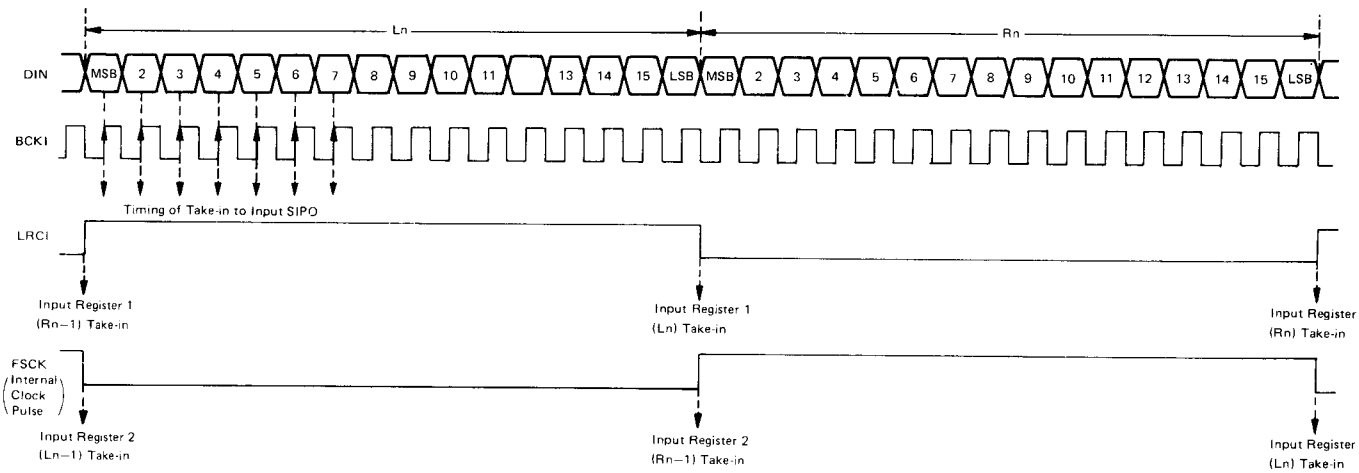


16bits right before LRCI edge is taken in as data.

Fig. 12 Audio data input timing example

• Selection between jitter-free mode and compulsory sync mode ($\overline{SYN}$, FSCO)

The signal timing (internal timing) applied to internal operation or output, that is produced from the system clock pulse (input to pin XTI), is independent from that of the data input section (BCKI, LRCI).

For this internal timing, the method of countering the jitter of clock pulse input LRCI is available in two types, "jitter-free mode" and "compulsory sync mode". Selection between these both is feasible by setting $\overline{SYN}$.

1) Jitter-free mode ($\overline{SYN}$="H")

As long as the phase difference between clock pulse LRCI and the internal timing is within +3/8 to −3/8 of the input sampling period (1/fs), the internal timing is not adjusted. Accordingly, even with a jitter component in clock pulse LRCI, the internal timing is not affected so that it is free from faulty operation or jitter transmission to output.

When the phase difference is without the above range, the internal timing is put in phase synchronously with the start side of clock pulse LRCI. More, this treatment is also performed when the reset input is given.

2) Compulsory sync mode ($\overline{SYN}$="L")

When this mode is engaged, the internal timing is always reset at a pulse edge of the start side of input LRCI. In this case, when a pulse period shorter than the specified system clock pulse period exists due to the jitter of input LRCI, a faulty operation may result.

Conversely, when a pulse period longer exists, the operation is properly made but no equal output timing is obtained.

3) Clock pulse FSCO (output)

This is a clock pulse with a period of fs obtained from the dividing process of clock pulse XTI.

CIRCUIT DESCRIPTION

• Data and DAC control signal output (DOL, DOR, BCKO, WCKO, DG, $\overline{COB}$, $\overline{OW18}$,$\overline{OW20}$)

1) Output data format

1) MSB first
2) 2's complement/COB (Complemented Offset Binary) selection ($\overline{COB}$)
   2's complement format ($\overline{COB}$="H")
   COB format ($\overline{COB}$="L")

2) Output data number-of-bits selection ($\overline{OW18}$, $\overline{OW20}$)

As to the number of bits for the output data, any of 16, 18 and 20-bit can be selected.

16-bit output ($\overline{OW18}$="H", $\overline{OW20}$="H")
18-bit output ($\overline{OW18}$="L", $\overline{OW20}$="H")
20-bit output ($\overline{OW18}$="H", $\overline{OW20}$="L")

However, this unit is set at the 18-bit output mode.

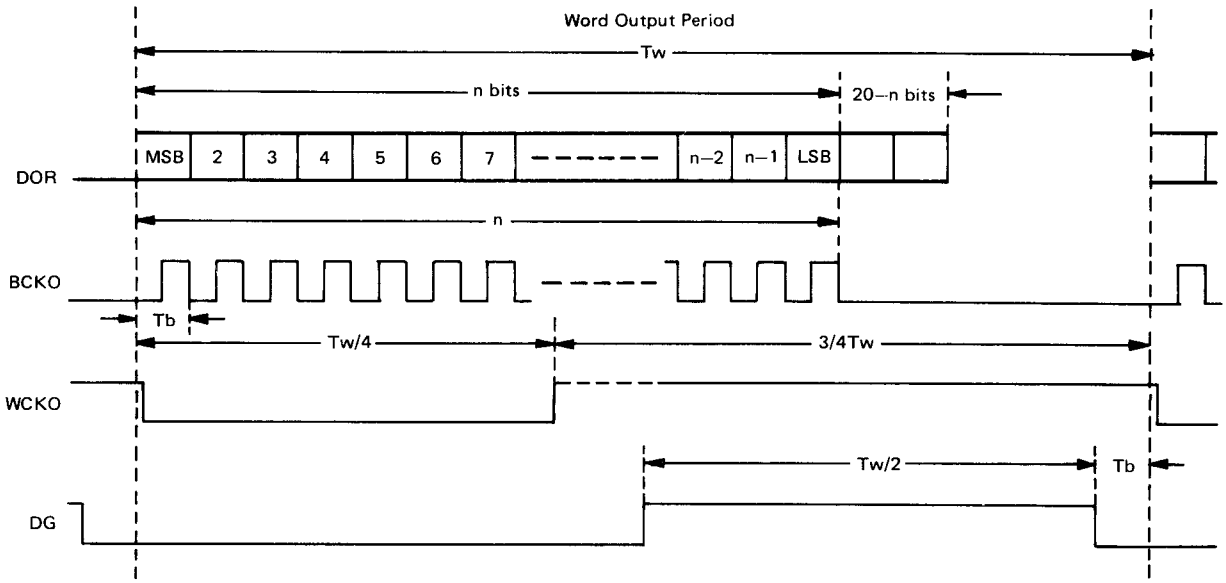
3) Output timing

The output timing of the audio output section is determined according to each internal system clock pulse frequency.

Item	Symbol in diagram	$\overline{CKSL}$	
		H	L
Internal system clock pulse frequency		192fs	256fs
Bit clock pulse period	Tb	Tsys	Tsys
Data word length	Tw	24*Tsys	32*Tsys

Tsys : internal clock pulse period (Refer to Table 10-1.)
Tb, Tw : serial output timing (Refer to Figure13 .)

Table 10–2 Output timing



Note : n means the number of output word bits.

Fig. 13 Output timing

• System reset ($\overline{RST}$)

When the reset input is made in the jitter-free mode, the internal operation timing is reset in synchronization with the leading edge of input LRCI. Making use of this, the output timing in the jitter-free mode can be aligned with input LRCI.

In the compulsory sync mode, no system reset is needed. Even in the jitter-free mode, the output timing does not need to be aligned with input LRCI and no system reset is necessary.

For system reset at power ON, externally connect a capacity of around 100pF to pin $\overline{RST}$. (Figure14)

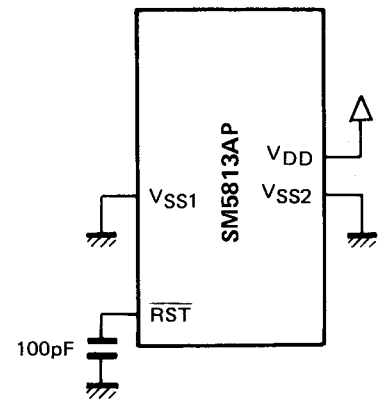


Fig. 14 Circuit example of system reset at power ON

CIRCUIT DESCRIPTION

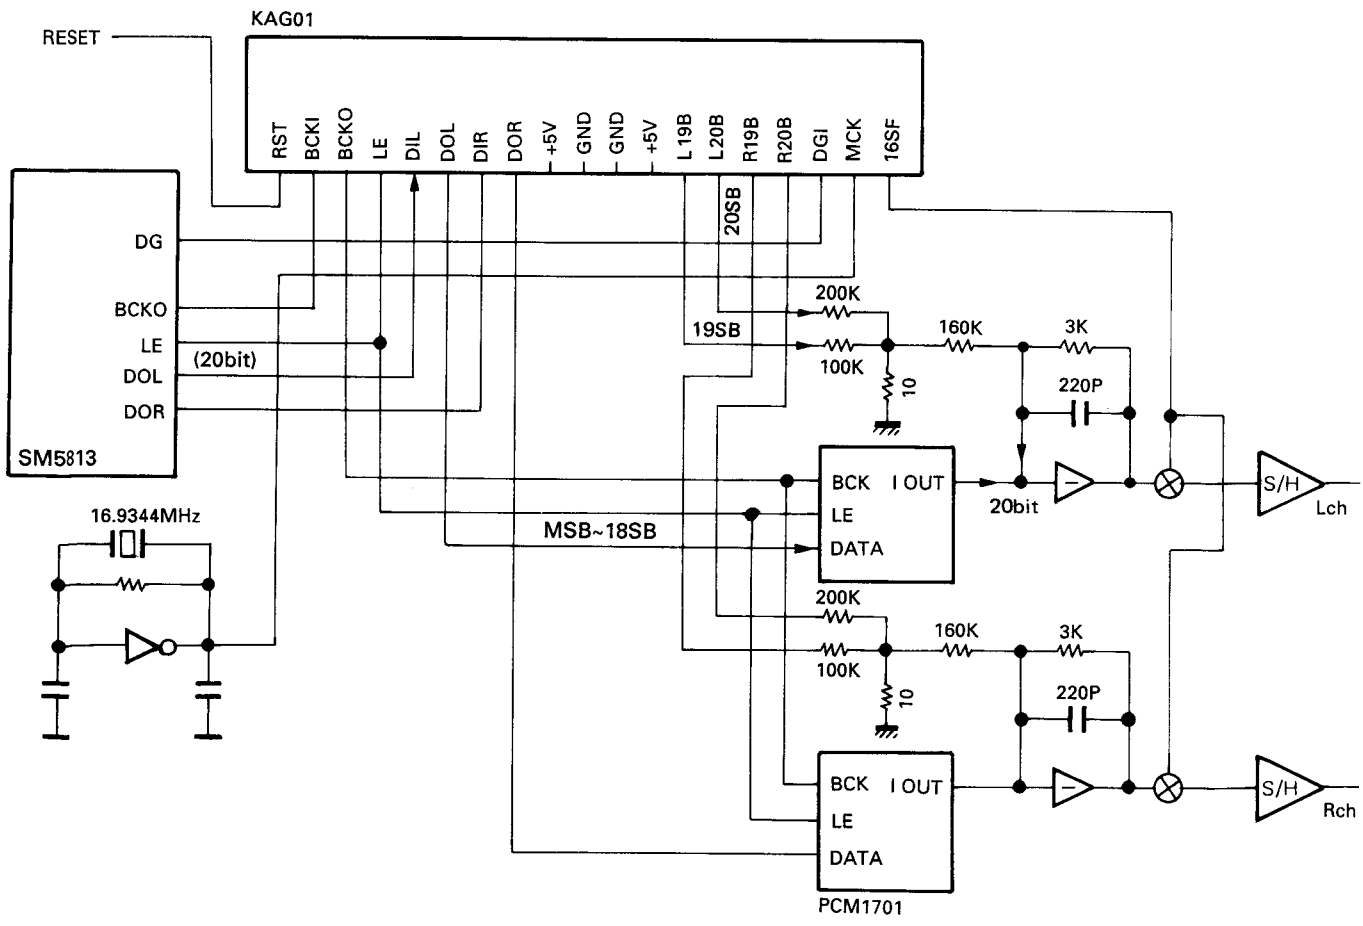
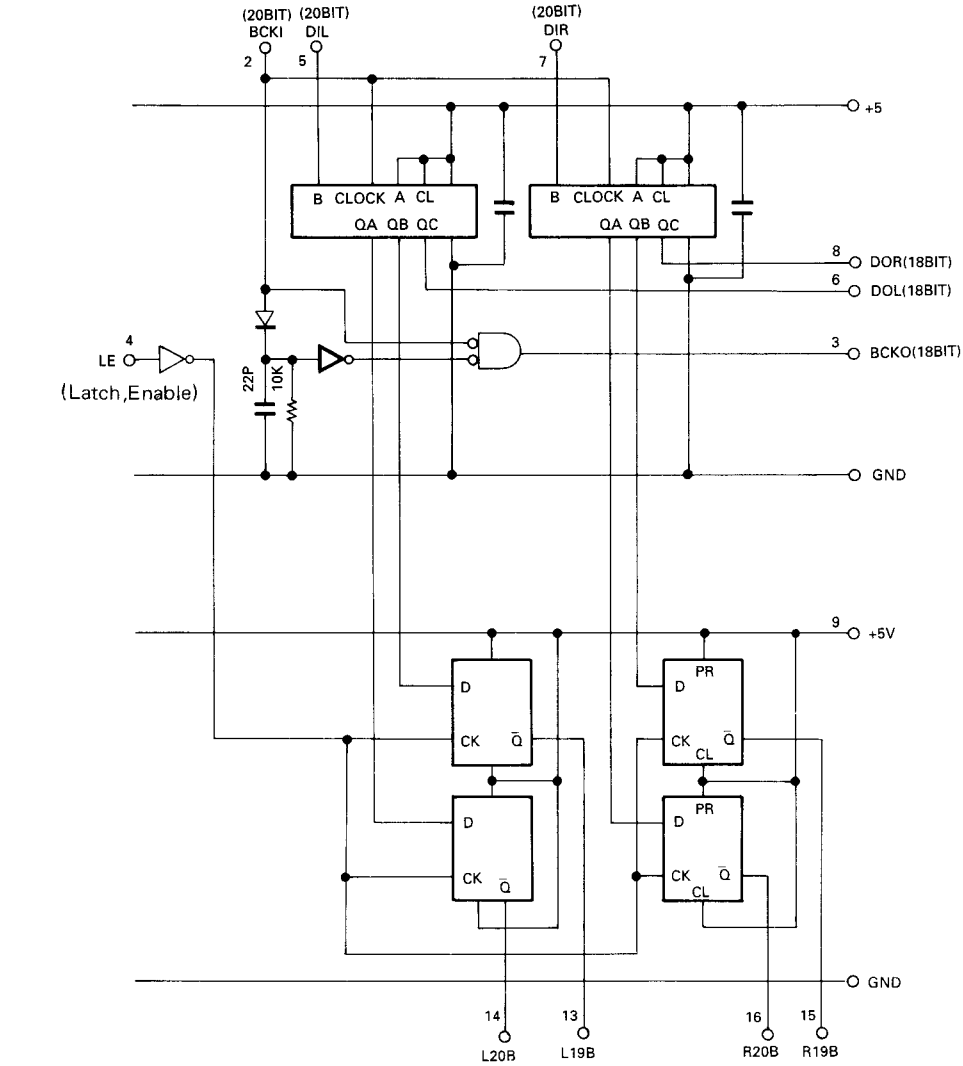
21	16FS	16x D-guritch output.

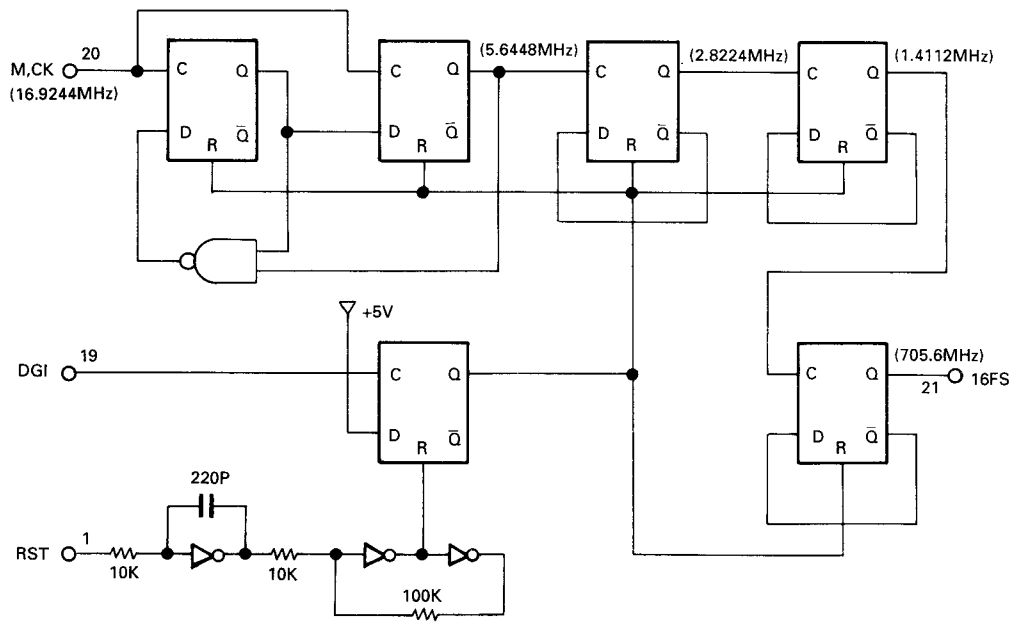
11-3. Block diagram



CIRCUIT DESCRIPTION

11-4. Block diagram





CIRCUIT DESCRIPTION

• TBC function

The write data clock pulse (WFS) and the read data clock pulse (RFS) are independent in operation from each other. Thus, the jitter margin ranges ±1 clock pulse widths.

For 2MSB detection, the level (2's complement) of the 2MLSB detection value at playback is output for both Lch and Rch.

Figure 17 shows the I/O waveforms in use of each digital filter.

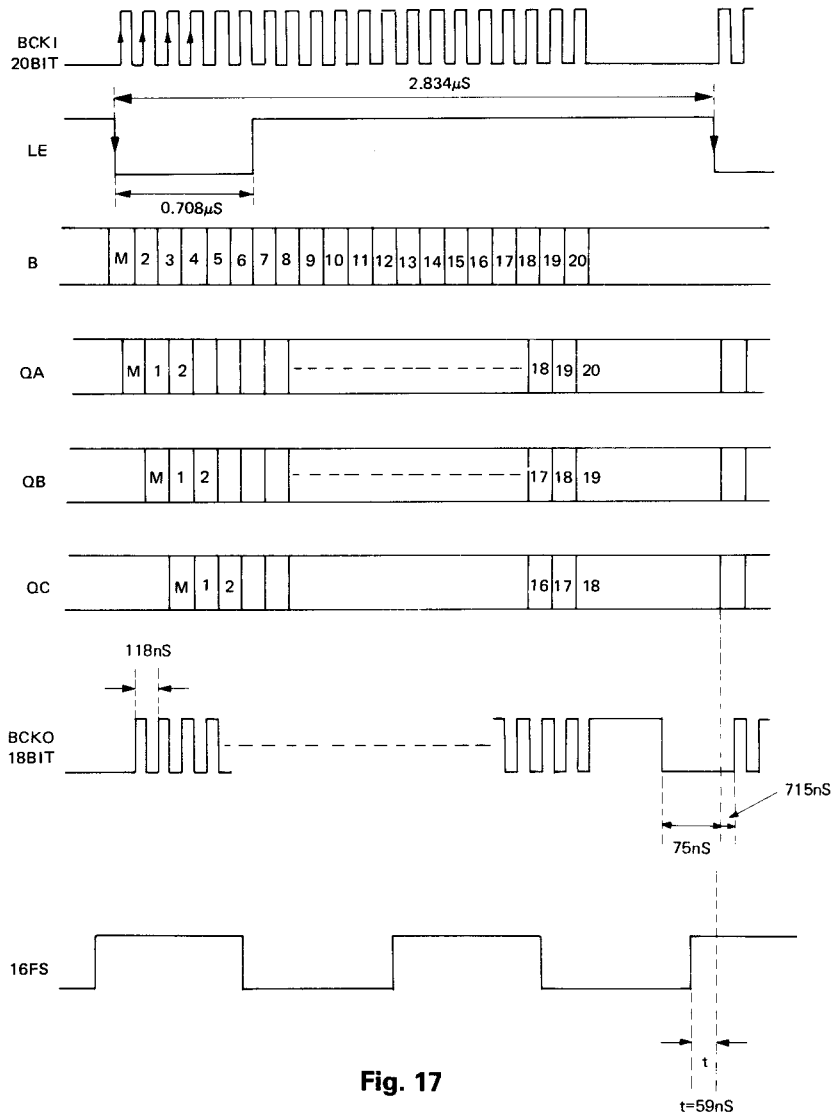


Fig. 17

• PLL function

Since the phase comparator is of a well-known system, its description is not made here.

For the counter setting of the divider, the type of the input clock pulse, LPF and VCXO circuit configuration, etc., refer to "11-2 Block diagram" and "11-3 Pin functions".

• Digital filter mode setting

Only two modes are available, 16-bit and 18-bit modes. This unit is set at the 18-bit mode.

The mode change is performed at the time of muting. The status right before the cancel of muting is held.

MECHANISM OPERATION DESCRIPTION

Figure 1 illustrates the positional relationship of the mechanism in the STOP mode. The position of each switch with the tray closed is as follows:

S1	Clamp UP switch	OFF
S2	Tray CLOSE switch	ON
S3	Clamp END switch	ON
S4	Tray OPEN switch	OFF

Note: The figure in ( ) following a parts name occurring in the drawing below is the same as in the exploded view of the service manual.

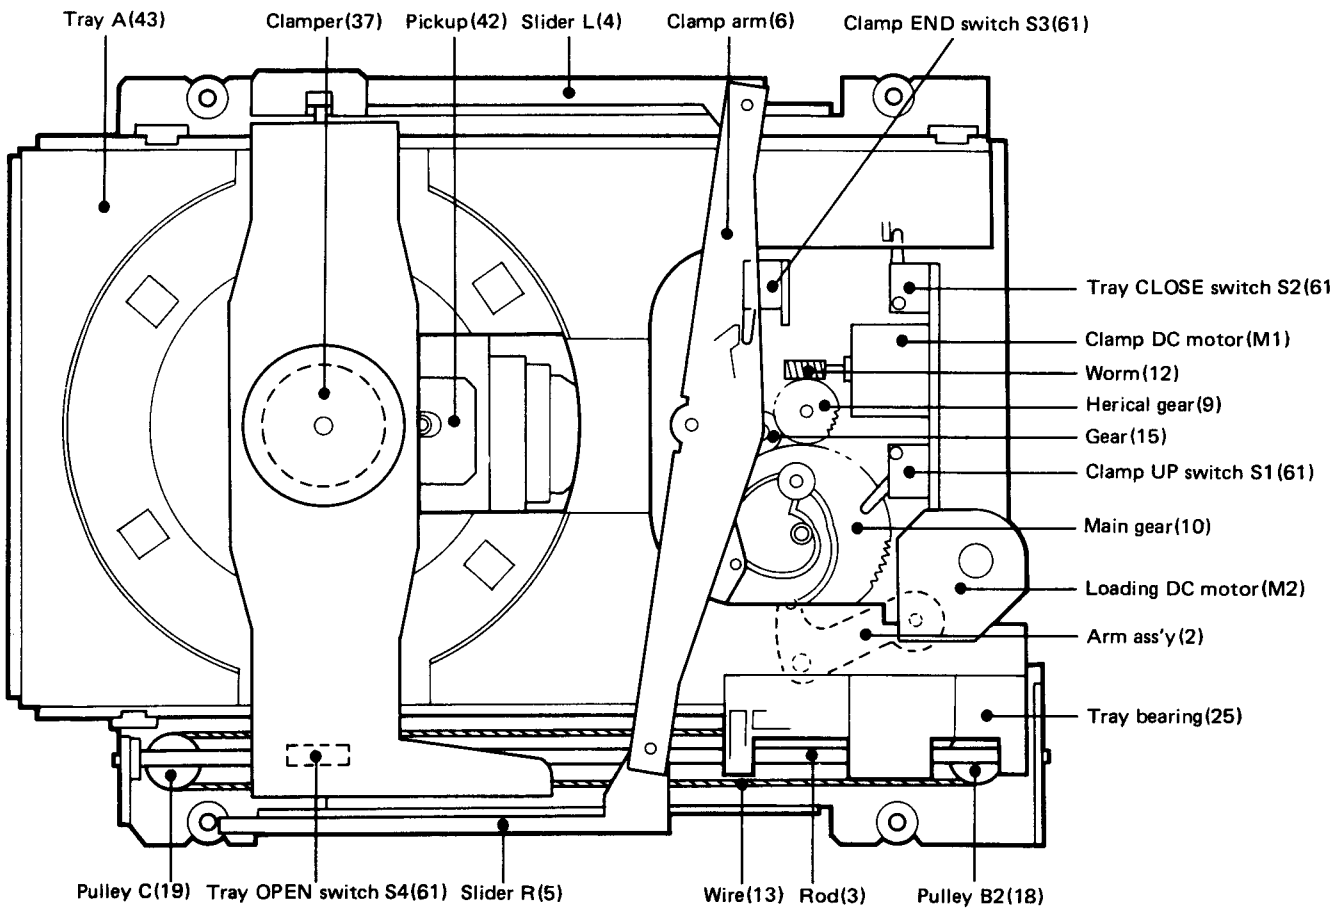

Fig. 1 Tray CLOSE status (as viewed perspectively from above)

MECHANISM OPERATION DESCRIPTION

1. Tray OPEN operation

When the OPEN/CLOSE key is pressed, an "H" signal is output from the microprocessor.

At first, the clamp DC motor (M1) thus rotates in the direction of arrow (❶). Further, the main gear rotates in the direction of arrow (❷) by an intermediate gear (Figure 2).

A groove as shown in Figures 3 and 4 exists in the lower side of the main gear. The arm ass'y moves along this groove to control the tray OPEN/CLOSE operation (Figure 3).

Figure 4 shows the position of the main gear with the tray opened.

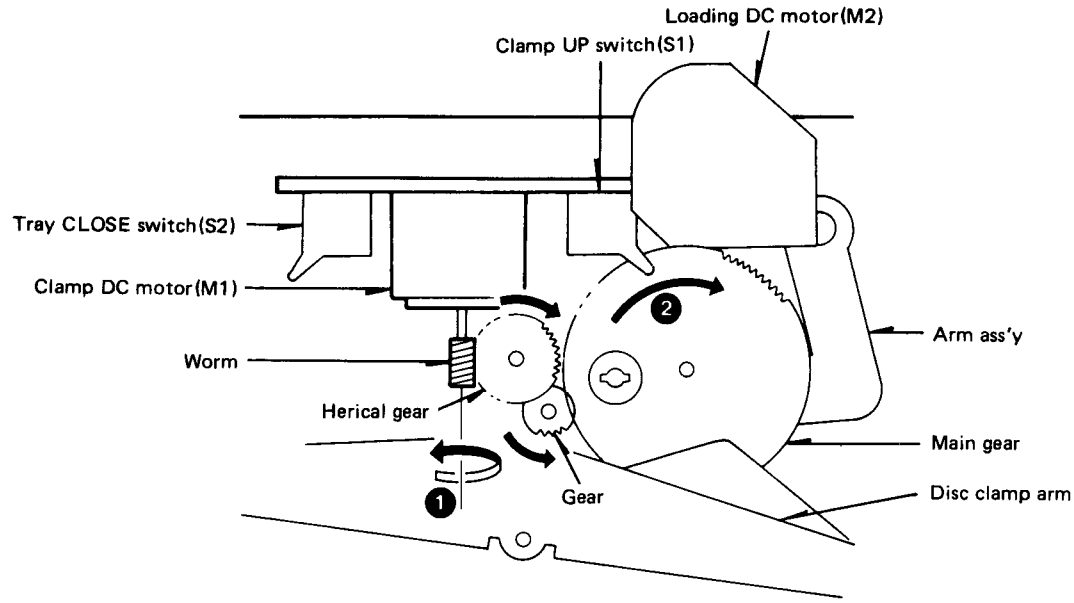

Fig. 2 Tray OPEN operation (1)

Due to the rotation in the direction of the arrow, the position of the arm ass'y moves in the direction of the broken line and comes to the location as shown in Fig.4. (At CLOSE, it moves in the reverse direction.)

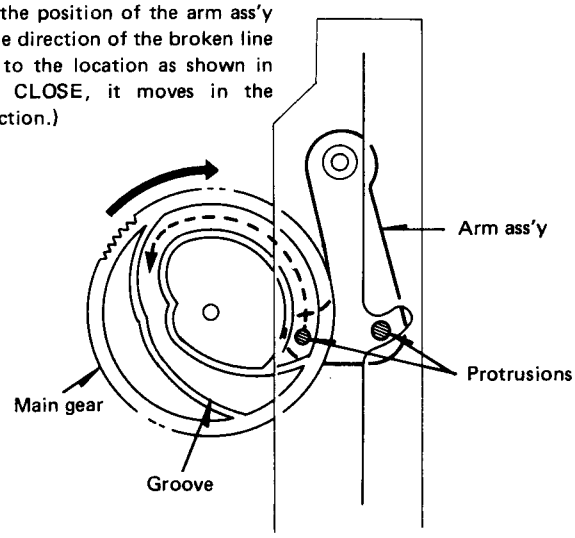

Fig. 3 Positional relationship between arm ass'y and main gear with tray closed (as viewed perspectively from above the main gear)

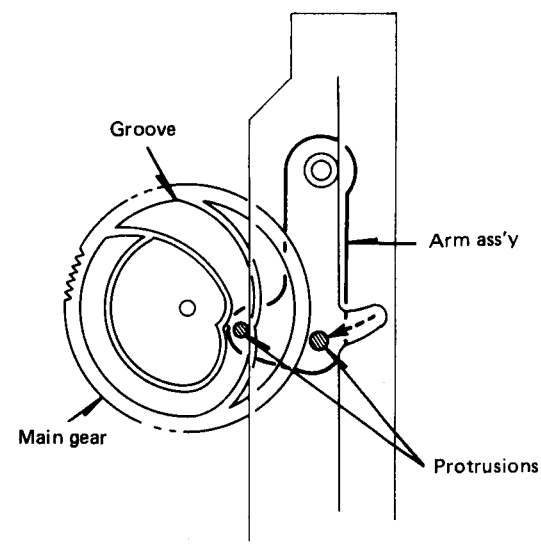

Fig. 4 Rear of main gear when tray opens

MECHANISM OPERATION DESCRIPTION

A similar groove is given in the upper side of the main gear. Along this groove, control is made over the clamp switch and the clamp mechanism. From the positional status with the tray closed as shown in Figure 3, when the clamp DC motor (M1) rotates in the direction of an arrow as indicated before, the protrusion placed at the lower side of the disc clamp arm is led in the direction of arrow (❸) along the groove of the main gear. Thereby, the disc clamp arm is rotated in the direction of arrow (❹) (Figure 5).

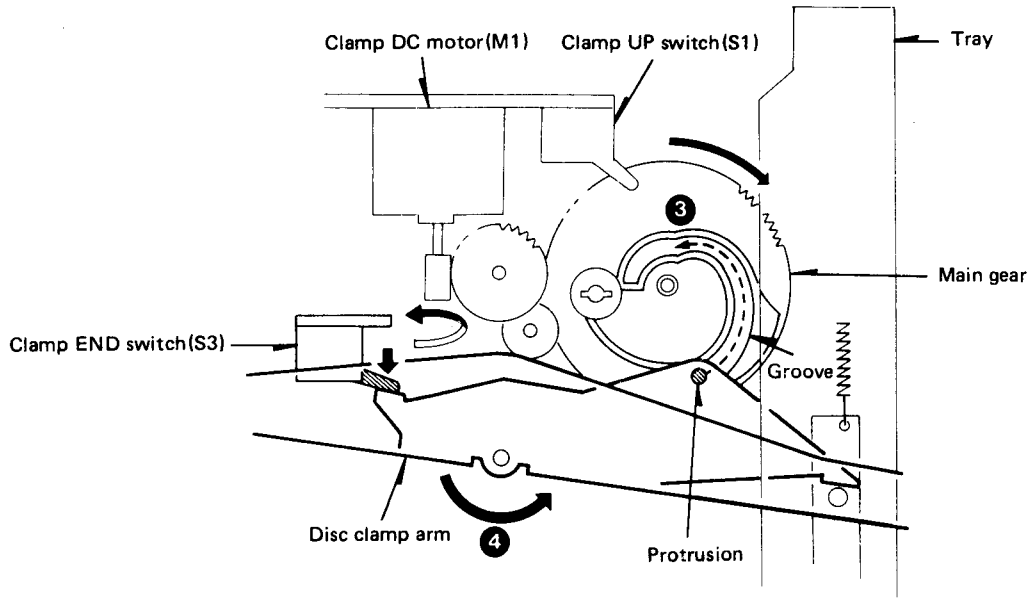

Fig. 5 Tray OPEN operation (2)

In addition, the top ends of the disc clamp arm are moved in the direction of arrows (❺) in response to the slider mechanism in order to raise and lower the disc clamper (Figure 6).

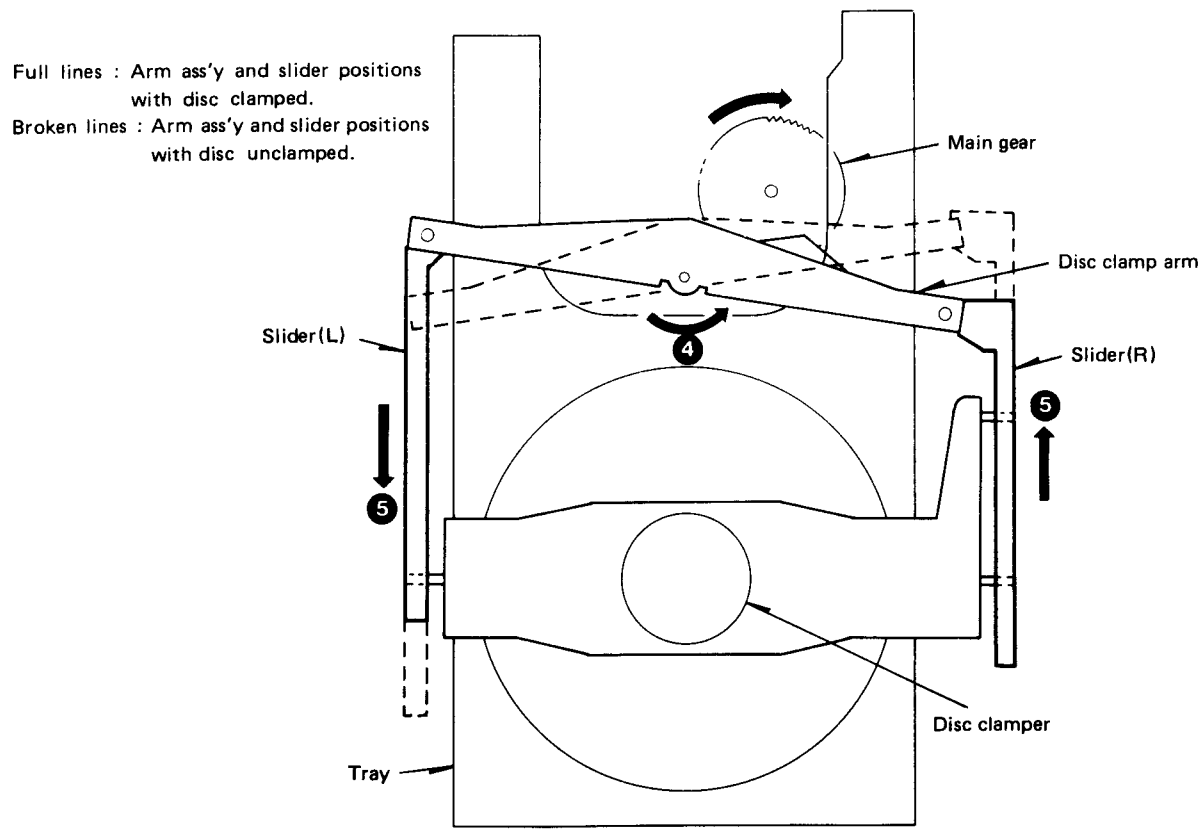

Fig. 6 Tray clamper UP/DOWN operation (1)

MECHANISM OPERATION DESCRIPTION

At this time, the tray is raised and lowered by the bent portion at the right lower side of the disc clamp arm. Figures 8 and 9 are the illustration on the process that the disc clamp arm moves in the direction of arrow (❹), the protrusion of the tray is released backwards by a spring and the tray rises entirely.

The left and right sliders are provided with slits as shown Figure 7, along which the left and right pins attached to the disc clamp arm slide up to unclamp. At this time, the disc clamp arm with the disc clamper fully raised is positioned with its left side down as opposed to the previous clamp position. (Figures 6, 7 and 8)

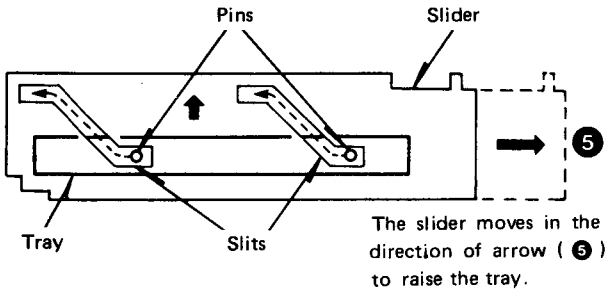

Fig. 7 Tray clamp UP/DOWN operation (2) (Side slider section)

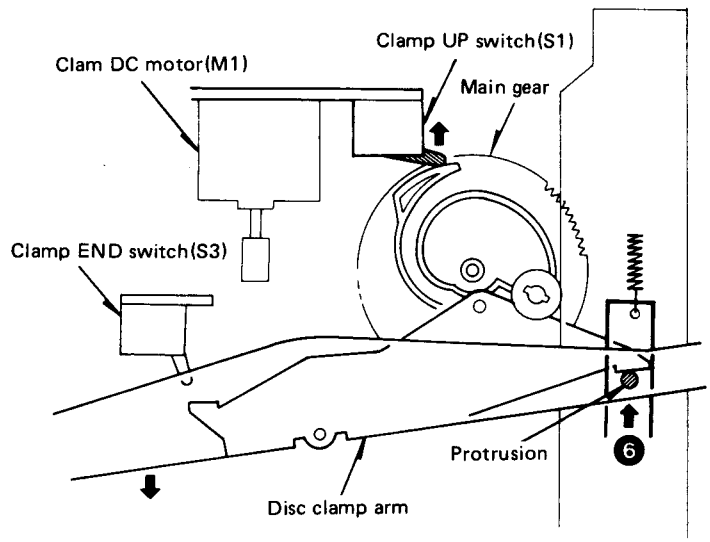

Normally, when the disc is clamped, the spring is expanded. Thus, it moves in the direction of arrow (❻) with the arm movement.

Fig. 8 Clamp UP switch (S1) ON and unclamping

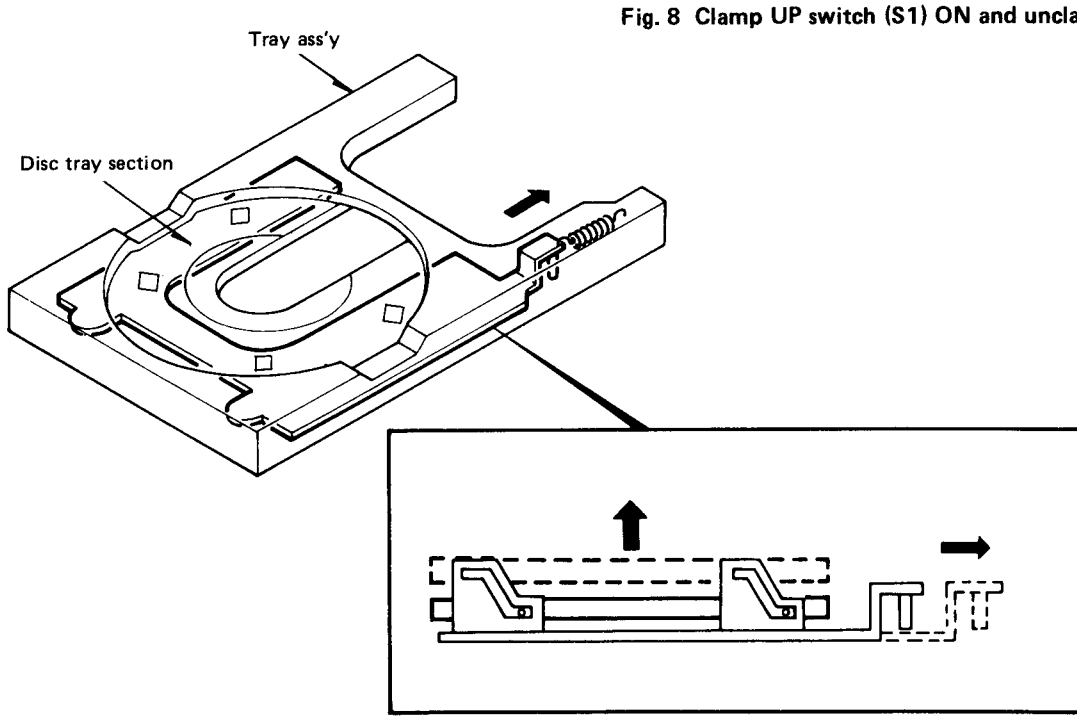

Fig. 9 Disc tray section UP/DOWN operation

MECHANISM OPERATION DESCRIPTION

Subsequently, S1 (clamper UP switch) turns ON by the groove at the upper side of the main gear, and the loading DC motor (M2) rotates in the direction of arrow (❼) to pull the wire via the belt (Figure 10).

As shown in Figure 11, a foot is given under the tray bearing by which the tray is installed to the rod. This foot works to turn ON/OFF S4 (tray OPEN switch). The loading DC motor (M2) rotates until S4 is turned ON by this foot to open the tray.

Note: The tray CLOSE operation is reverse to the tray OPEN operation in respect to the operational sequence. Therefore, the description of the tray CLOSE operation is here omitted.

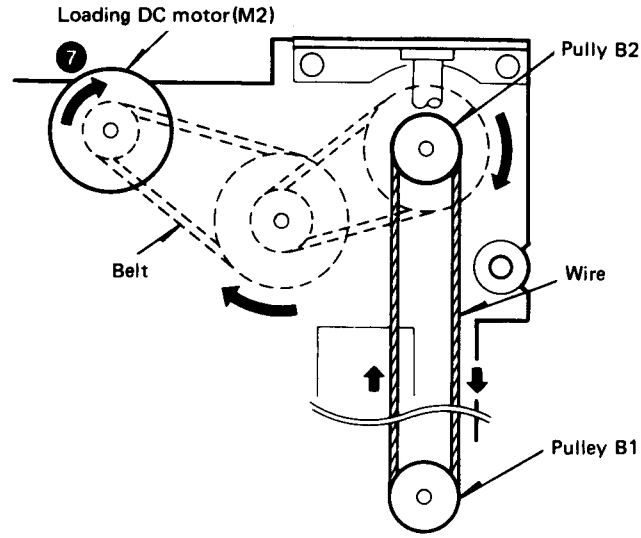

Fig. 10 Tray OPEN operation (3)

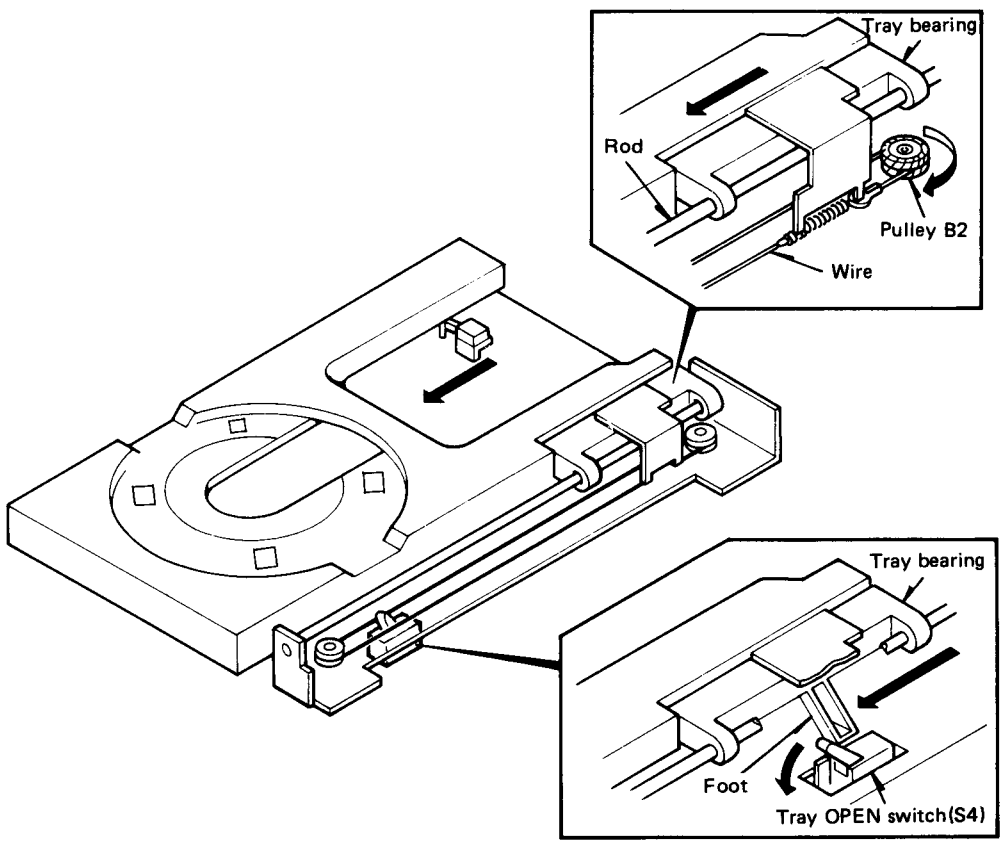

Fig. 11 Tray OPEN operation (4)

ADJUSTMENT

No.	ITEM	INPUT SETTING	OUTPUT SETTING	PLAYER SETTING	ALIGNMENT POINT	ALIGN FOR	FIG
1	LASER POWER	–	Apply the sensor section of the optical power meter on the pickup lens.	Short-circuit pins TEST and turn the power on to enter the test mode. Press the MANUAL S. key(⏭)to move the pickup outwards. Press the CHECK key to check that the LD emits light. Then, confirm that the display is" 03 ".	–	On the power from 0.1 to 0.3mW, when the diffraction grating is correctly aligned with the RF level of 1.0Vp-p or more and the TE (servo open) level of 1.0Vp-p or more, the pickup is acceptable.	(a)
2	VCO	–	Connect a frequency counter to PLCK . (X32-1500)	Press the STOP key. and confirm that the display is "01".	L4 (X32-1500)	4.30MHz	(b)
3	TRACKING ERROR BALANCE	Test disc Type 4	Connect an oscilloscope as follows. CH1: RF (X32-1500 RF) CH2: TE (X32-1500 TP3)	Press the REPEAT key to open the tray. Load a disc and close the tray by pushing it by hand. Then,press the CHECK key. Confirm that the display is"03".	TE BALANCE VR104 (X32-1500)	Symmetry between upper and lower patterns, or DC=0±0.05V	(c)
4	FOCUS ERROR BALANCE	Test disc Type 4	Connect an oscilloscope as follows. CH1: RF (X32-1500 RF) CH2: TE (X32-1500 TP3)	Press the PLAY key. Confirm that the display is" 05 ".	FE BALANCE VR103 (X32-1500) Test disc	Optimum eyepattern	(d)
5	FOCUS GAIN	Test disc Type 4 Apply signal of 800Hz, 50mVrms to CN10 pin 1-2. (X32-1500)	Connect an LPF to CN10 pin 1-2,to which connect an oscilloscope or an AC voltmeter. (X32-1500)	Press the PLAY key. Confirm that the display is" 05 ".	FOCUS GAIN VR101 (X32-1500)	Two VTVMs should read the same value. 50mVrms	(e)
6	TRACKING GAIN	Test disc Type 4 Apply signal of 1.0kHz, 50mVrms to CN10 pin 4-5 (X32-1500)	Connect an LPF to CN10 pin 4-5,to which connect an oscilloscope or an AC voltmeter. (X32-1500)	Press the PLAY key. Confirm that the display is" 05 " .	TRACKING GAIN VR102 (X32-1500)	Twe VTVMs should read the same value. 50mVrms	(e)
7	DAC DISTORTION (MSB)	Test disc Type 4	Connect an distortion meter to the output terminal(FIXED).	Play the 1kHz, -20dB signal in track No.15	VR1:L VR2:R (X32-1500)	Minimum distortion	(f)
8	DAC DISTORTION (2SB)	Test disc Type 4	Connect an distortion meter to the output terminal(FIXED).	Play the 100Hz, 0dB signal in track No.4.	VR3:L VR4:R (X32-1500)	Minimum distortion	(f)
9	DAC DISTORTION (3SB)	Test disc Type 4	Connect an distortion meter to the output terminal(FIXED).	Play the 100Hz, 0dB signal in track No.4.	VR5:L VR6:R (X32-1500)	Minimum distortion	(f)

(Note) Type 4 disc: SONY YEDS-18 Test Disc or equivalent.
LPF: Around 47kΩ+390pF or so.
Step 1~6 are TEST mode.
If adjust step 7 or 8,should readjust stops 7 and 8.

DP-8020(K)

ADJUSTMENT

DIFFRACTION GRID ADJUSTMENT

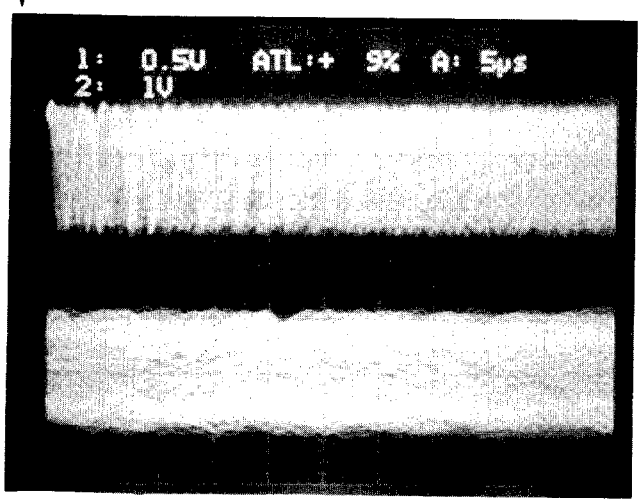
(Photo. 1)

- RF signal and T.Error signal after diffraction grating adjustment.

(Photo. 2)

- RF signal and T.Error signal when there is small diffraction grating position error.
- The T.Error signal level is small, and the envelope is as shown in the diagram below.

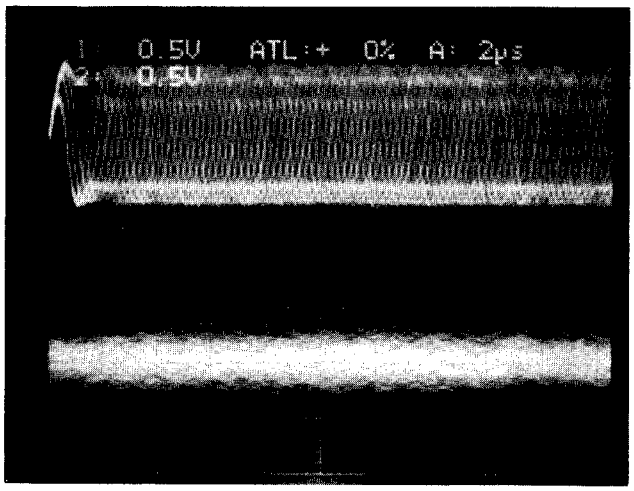
Trigger point



(Photo. 3)

- RF signal and T.Error signal in test mode (with focusing ON).
- When the sub-beam traces the same bit series as the main beam during diffraction grating adjustment, bringing the RF trigger point to the position shown in the Photo causes a "projection" to be obsevies in the T.Error waveform.

ADJUSTMENT



CH1 RF
0.5V/div

CH2 E.Spot
0.1V/div

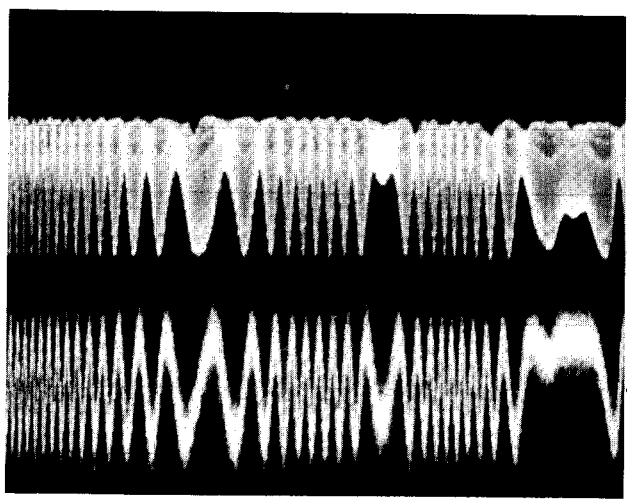
AC coupling for
CH2 only

(Photo. 4)

(2μsec/div)

Projection

- RF signal and E.Spot signal in test mode (PLAY).
- If the diffraction grating has been adjusted properly, the influence of triggering is observed on the E.Spot waveform of approx. 20μs after RF signal, in the form of a projection.



CH1 RF
1.0V/div

←0(V)

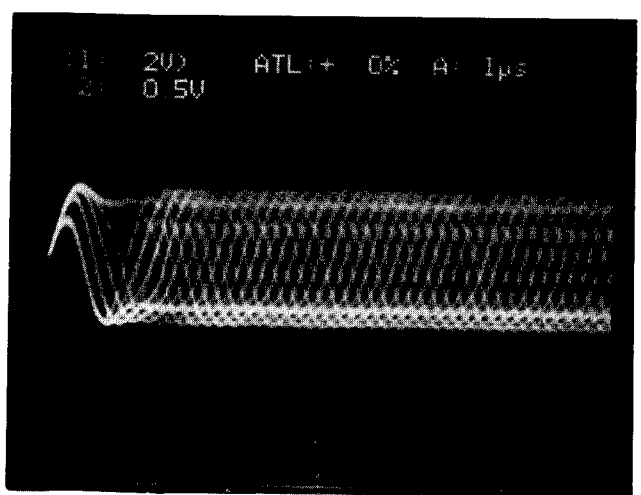
CH2 T.Error
2.0V/div

←0(V)

(20msec/div)

(Photo. 5)

- RF signal and T.Error signal; in test mode (Focusing ON). (Disc type 4)
- Adjust T.Error so that the waveform is symmetrical above and below 0V. (VR104 of X32-1500)



RF signal
0.5V/div

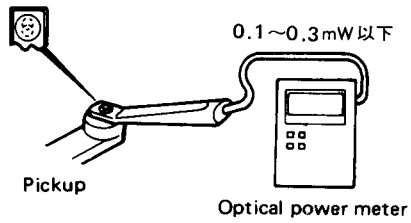
(Photo. 6)

(1μsec/div)

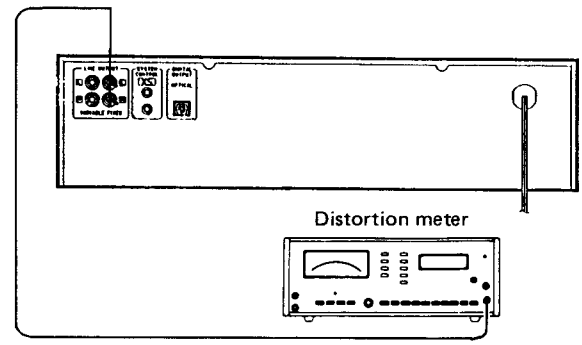
- RF signal in test mode (PLAY).
- Perform the tangential and focusing offset adjustments so that each of the center cross points are focused into one point on the display. The crossing points above and below the center shall also be displayed clearly.

ADJUSTMENT

(a) **Laser Power**



(f) **DAC Distortion**

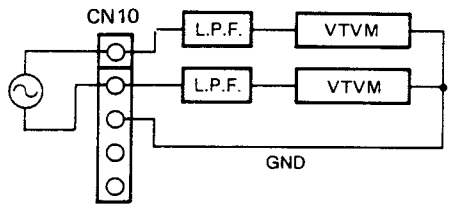


(e) **Focus Gain and Tracking Gain**

FOCUS GAIN

Two VTVMs should read the same value. 0dB (±50m Vrms)

50mV 800Hz



TRACKING GAIN

Two VTVMs should read the same value. 0dB (±50m Vrms)

50mV 1.0kHz

- Voltage : (PLAY) STOP when POWER ON.
- DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

CAUTION : For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). ⚠ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

⚠ indicates safety critical components.

SPECIFICATIONS

[Format]

Type ..... Compact disc player
Read system ..... Non-contact optical pick-up
Rotational speed ..... About 200 to 500 rpm

[Audio]

Frequency response ..... 2 Hz ~ 20 kHz ±0.5 dB
Signal-to-noise ratio ..... more than 113 dB
Total harmonic distortion ..... 0.0013% at 1 kHz
Channel separation ..... more than 110 dB at 1 kHz
Wow & flutter ..... Below measurable limit

Output

LINE (FIXED) ..... 2.0 V
(VARIABLE) ..... 0 ~ 2.0 V
DIGITAL (OPTICAL) ..... −15 dBm ~ −21 dBm
Headphone jack ..... 20 mW (8 Ω)

[General]

Power consumption ..... 25 W
Dimensions ..... W: 440 mm
H: 132 mm
D: 381 mm
Weight ..... 10.1 kg

Note:
KENWOOD follow a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note :
Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the Other Areas (M) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
